EHS Global Alert

How are changing international environment, health and safety standards affecting your business? How do you know? In today's shrinking world, it is absolutely essential to keep up with new EHS rules and regulations in countries where your organization operates. Multinationals with branches overseas are vulnerable to changing bans and restrictions on the use and marketing of raw or refined chemicals and are subject to increasingly stringent requirements for cutting emissions and minimizing waste. There are revised labeling and packaging requirements for consumer products as well as assignments of liability for remediation and repair of environmental damage. These are among thousands of provisions affecting environment, health and safety professionals, newly enacted or amended during the year.

With EHS Global Alert®, you'll have the information you need to ensure that your company is fully prepared for the next set of regulations... whether they're issued by your continental neighbor or by a less familiar government on the other side of the globe.

EHS Global Alert is brought to you by Bloomberg Environment, the world's most trusted and respected source of environmental and governmental information, and by Enhesa. Every week, you'll receive detailed abstracts of all proposed and amended EHS legislation, in each country covered, as it moves through every stage of that government's regulatory process.

This information will help you:

- **Manage risks and avoid liabilities.** Track the latest regulatory requirements. Evaluate your operations and activities accordingly to ensure cost-effective compliance, shoulder new responsibilities, and avoid penalties.
- **Anticipate change.** Monitor regulatory and policy developments to prioritize their real and potential impacts on your operations and markets. Use that information to develop programs for improving your business and environment, health and safety performance.
- **Integrate EHS into your corporate strategies.** Knowledge is the key to sustainability. When you improve your understanding of how existing and new requirements affect your products and services, you can design and implement appropriate systems and programs for long-term success.

Scan the following list of topics covered in EHS Global Alert and the list of countries whose legislative, regulatory, and policy developments it monitors. Think about how you could obtain—and maintain—such information on your own.

Quite simply, you can't. Not with the same timeliness and accuracy that you can depend on from Bloomberg Environment, if you were able to get the information at all. You would need your own staff of internationally based reporters, correspondents, editors, researchers, and government liaisons.

Rely on EHS Global Alert to keep you up-to-date and in business around the world.

Don't miss another critical action in EHS legislation, regulation, and policy—developments that can make or break your business—virtually anywhere in the world.

Topics covered:

Administrative & Legal Structures

General Environmental Requirements

- Permits
- Release reporting
- Site contamination

Air Emissions Management

- Air pollution
- Climate change and greenhouse gas emissions
- Restrictions and controls

Water Management

- Wastewater discharges
- Water abstraction and use
