

Change in emissions required from 2012 to 2030, under the EPA's Clean Power Plan (% of 2012 emissions)

Data are based on EPA modelling and EPA historical emissions inventories. Map shows percent change in total emissions from fossil fuel-fired plants, including emissions from new sources which are not covered by the proposed Clean Power Plan. Darker colours indicate deeper emissions cuts; yellow states may actually *increase* their overall emissions, while remaining in compliance with the EPA's Clean Power Plan. Data are not available for Alaska and Hawaii; * Vermont and DC are not covered by the EPA's regulations.
