

2016

Impact Report Highlights

Planet

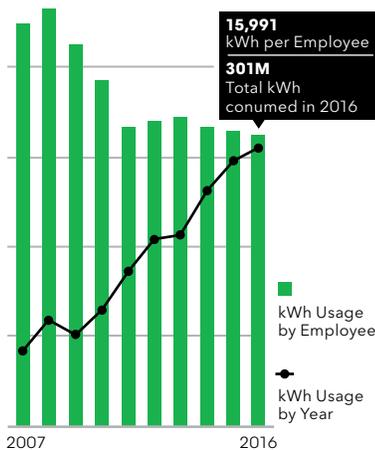

The primary objective of our sustainability strategy is to decouple the company's growth from environmental impact, while proving the business case for sustainable operations. To date, we have improved operating margins, minimized risk and collaborated with our partners to implement more than 120 environmental projects, resulting in 685,489 metric tonnes of avoided CO₂ emissions—the equivalent of over three years of Bloomberg's carbon emissions—and avoided \$95 million in operating costs.

Energy Efficiency

Bloomberg's energy strategy is comprehensive, focusing on reducing overall energy consumption, implementing energy-efficiency projects at our facilities, developing both on- and off-site renewable energy projects and building our facilities to environmental standards.

Total kWh and kWh per employee

While total kWh consumed has increased by 33% since 2007, kWh consumed per employee has decreased 29% in the same period

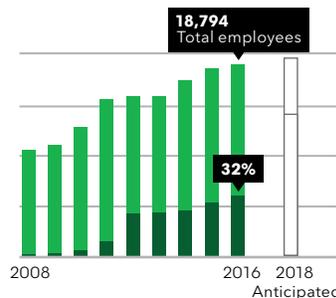

Green Buildings

Facilities have always been, and continue to be, a prime focus of our environmental efforts, as well as an area in which we have had significant success to date. In 2016, Bloomberg utilized 197 non-data center locations globally, representing 3.6 million square feet, which consumed 148 million kWh and generated 54,383 metric tonnes of CO₂e. By year-end 2016, our current and historical reduction efforts, for both buildings and technology, have resulted in savings/avoidance of over 91,000 metric tonnes of CO₂e, the equivalent of approximately 242 million kWh and a project-based cost savings of \$40.1 million since 2008.

2016 LEED offices

32% of Bloomberg employees sit in LEED certified offices

Renewable Energy

Bloomberg has been pursuing renewable energy projects since 2009, with our first installation in New Jersey in 2012. Since then, we have completed four more projects, including an on-site roof-mount array at our New Jersey data center in early 2016, and continue to aggressively pursue opportunities wherever feasible.

Path to RE100 plan

Signed and completed projects have a NPV of over \$8 million
