INTRODUCTION

- THE IMPERATIVE FOR INNOVATION
- WHAT IS THE INNOVATION DELIVERY MODEL?
- HOW TO READ THIS PLAYBOOK
THE IMPERATIVE FOR INNOVATION

The urgency for innovation in cities is greater today than it has been in a generation. Leading cities has never been easy, but today cities are facing budget shortfalls and stagnant economies, while facing escalating demands in education, crime prevention, economic development, and beyond.

Mayors from around the country report that city governments face a number of barriers that make innovation challenging. Three stand out.

First, city governments are not always organized to support innovation, especially when it comes to addressing “horizontal” issues—such as poverty reduction, sustainability, or customer service—that are the shared responsibility of multiple departments and chains of command. The absence of standard management and engagement strategies to overcome department silos makes it harder for leaders to define, deliver, and sustain solutions to these complex and multifaceted challenges.

Second, many mayors’ offices lack the human capital, organizational capacity, or financial resources to take on bold ideas or grand challenges. A tension exists between “putting out fires” and managing day-to-day responsibilities and finding the time and space needed to think, plan, and launch new solutions.

Finally, there are few incentives within bureaucracies to experiment and try new things—but there are plenty of motivations to maintain the status quo or settle for incremental change. New programs that fail tend to attract more attention than those that succeed. And when it comes to innovation, there will inevitably be efforts that do not work as planned.

The Innovation Delivery Model was created to provide cities with a method to reduce these barriers and deliver change more effectively to their citizens. We define “innovation” as the creation of new solutions for city challenges or the adaptation of solutions that have been tested elsewhere. Innovation can be disruptive, breaking with the past in a big and immediate way, or it can be incremental, using a series of smaller changes to modify existing approaches. “Delivery” is a relentless, systematic focus on setting goals for change, effectively implementing solutions, and monitoring and measuring results. Many cities have bold ideas, but lack the processes, resources, and focus to get them off the ground and achieve results for citizens.

In November 2011, with support from Bloomberg Philanthropies, five major United States cities—Atlanta, Chicago, Louisville, Memphis, and New Orleans—began to use the Innovation Delivery Model (the “Model”). In each city, an Innovation Delivery Team was established and charged with developing and seeing through the implementation of solutions to top mayoral priorities such as customer service, murder, homelessness, and economic development, using a sequence of steps. Each team was staffed with top talent and introduced to the Innovation Delivery Model. Each worked as an extension of the mayor’s office, functioning like an in-house consulting group. The results have been powerful—each city has implemented innovative policy solutions to achieve meaningful impact.
INTRODUCTION

Atlanta housed more than 800 chronically homeless people in 16 months, 600 of them veterans, in permanent housing.

In nine months, Chicago cut the licensing time for new restaurants in half; more than 600 new restaurants have opened since the Team began its work.

Louisville redirected 26% of low-severity 911 medical calls to a doctor’s office instead of requiring an ambulance trip to the emergency room.

Memphis reduced retail vacancy rates by 30% along key commercial corridors.

In 2013, New Orleans reduced homicides by 20% compared to 2012, achieving the city’s lowest murder total since 1985.

These achievements stand among many others accomplished by the cities with help from their Teams. This Playbook is informed by the real and varied experiences of these five pioneer Innovation Delivery cities, and describes how the Model can be applied to drive significant and meaningful impact in other cities.

WHAT IS THE INNOVATION DELIVERY MODEL?

OVERVIEW

The Innovation Delivery Model builds on best practices from around the world. It combines proven strategies to propel innovative solutions to tough, high-priority problems with exceptional project management techniques that reliably deliver results. While some jurisdictions have chosen to appoint a single person to enhance their city’s ability to develop new ideas, the Innovation Delivery Model is distinct from this approach in that it drives not just the development of new ideas, but also their successful implementation. The Model is a process for cities to follow that emphasizes:

- Commitment to data. A relentless focus on using information to understand a problem—how things are working, trends over time, what has been tried and to what effect—underpins successful development and implementation.

- Careful exploration of what has worked before. Existing solutions that have been successful elsewhere are often promising pathways. If you know what works, adopt it and adapt it.

- Space and techniques to generate new ideas. Dedicated time, tested strategies, and a bold philosophical imperative to expand thinking and engage new voices are core features of the Model.

- Structured project and performance management. New ideas are developed into detailed implementation plans. Proven techniques are used to establish specific, measurable targets for the impact of the work, as well as a process for regular assessment and reflection on progress toward these targets.

- Engaging partners. The Model is collaborative, and its success depends on the involvement of a range of players—city agencies, county, state, and national governments, not-for-profits, chambers of commerce, community groups—to leverage one another’s influence to get the job done.
This Playbook describes the Innovation Delivery Model using a series of steps that, from start to finish, chart a proven method for tackling difficult problems at the city level. The Model’s four core steps are depicted below.

Once substantial progress is made, return to Step 1 to address a new priority

These four steps repeat: Innovation Delivery Teams quickly address a major problem area and then move back to Step 1 to address the next important issue.

THE INNOVATION DELIVERY TEAM

The Innovation Delivery Team—a small group of dedicated staff led by a Director who reports directly to the mayor—is at the heart of the Model. Innovation Delivery Teams work side by side with other senior staff members (e.g., deputy mayors, chiefs of staff), city units, and departments, but they sit outside the regular organizational hierarchy, neither managing nor managed by their collaborators. Like effective management consultants, Teams are expected to leverage cutting-edge tools and project management techniques to come up with powerful new ideas or approaches and drive fast, impactful, goal-oriented reform.

The Team is designed to be 100% focused on achieving specific results in a narrowly defined, though significant, priority area—even as key partners have broader responsibilities and potentially competing priorities. Innovation Delivery Teams are uniquely positioned to coordinate across departments and functions, leveraging the talent and commitment of all actors to achieve concrete results.

Teams are not responsible for direct implementation. For example, a Team would not take over or replace the homeless services unit in an effort to improve outcomes for those living on the streets. Rather, it would work with homeless services officials—in partnership, for instance, with police, housing, and mental health departments, as well as the nonprofit sector—to develop a plan of action that is anchored in evidence, a clear path to successful implementation of the plan, and the ability to track progress and jointly solve problems along the way. Reflecting this fact, in the Innovation Delivery Model, each discrete effort (called an “initiative”) to be implemented is formally assigned an Owner and a Sponsor. The Owner is responsible for day-to-day implementation and is typically, but not always, a manager within a city agency or division. The Sponsor is responsible for the overall success of the initiative and is usually a person to whom the Owner reports.
While the Innovation Delivery Model can be a powerful instrument to tackle city problems, success is not automatic. In addition to fidelity to the Model, the most successful efforts share at least three critical ingredients:

1. **COMMITTED MAYORAL SUPPORT**

   Teams struggle when the mayor is not engaged. The mayor can leverage his or her influence to position Teams for success by underscoring the urgency of the issues they have been charged to address. The mayor should be involved enough in Innovation Delivery that he or she is knowledgeable about progress on the Team's priorities, informed when major issues arise, and available to step in quickly with resources, time, or political leverage to ensure that barriers are overcome. The best results are achieved when mayors engage in and consistently reinforce the importance of the work.

2. **A CLEAR MANDATE AND ROLE FOR THE TEAM**

   A clear mandate from the mayor as Teams launch and as their work progresses has been instrumental in positioning Teams for success. The Model works best when the mayor makes clear that he or she views the Team as an in-house consultancy and that he or she expects the Team to work closely with agency leaders, understand the causes and complexities of a problem, analyze data, identify promising practices, come up with bold new approaches, design responsive solutions, and support the implementation of initiatives that effect meaningful change. The mayor must also make clear to deputies and agency leaders that he or she is expecting meaningful results, and that it is their responsibility to achieve them.

3. **RESOURCE COMMITMENT AND CAPACITY**

   For a city to successfully use the Model to achieve real change, city agencies must ante up staff time and other resources to address the problems that they and the Team have been tasked to solve. Change will not occur if the Team operates separately from city agencies. The most effective Teams collaborate from the start with agency partners, lending them additional support and brainpower; they do not swoop in and take over. Indeed, in the cities that have used the Model most effectively, agency partners report feeling like a weight was lifted when they learned the Team had been deployed to help them solve a problem.
HOW TO READ THIS PLAYBOOK

The chapters of this Playbook lay out the Innovation Delivery Model, with the aim of guiding a Team through a series of steps from receiving a mandate from the mayor to delivering solutions. Following this Introduction, there are five chapters in this Playbook:

- The first, *Getting Started*, describes initial actions necessary to begin, including setting high-level priorities at the mayoral level, and the skills to look for in staffing the Team.
- The next four—*Investigate the Problem, Generate New Ideas, Prepare to Deliver,* and *Deliver and Adapt*—describe the four core steps of innovation and delivery, and provide illustrations of how these steps have been applied in practice.

Throughout the Playbook, special “Get Engaged” alerts provide advice, strategies, tactics, and tools to help foster productive working relationships with partners at critical moments in the work.

An accompanying Toolkit, available in electronic form, includes blank templates for many of the examples of work products shown throughout this Playbook, as well as job descriptions and other tools. Also, a glossary at the back of this Playbook provides quick definitions of key terms, such as metric, charter, and Initiative Owner.
A. UNDERSTAND KEY ROLES IN THE INNOVATION DELIVERY MODEL
B. CHOOSE AND COMMUNICATE PRIORITY AREAS
C. HIRE AND STRUCTURE THE TEAM
D. PLAN TO MOVE QUICKLY
E. BUILD SUPPORT FOR THE TEAM
This chapter describes the steps that a city should follow when it seeks to implement the Innovation Delivery Model for the first time, including creating and hiring the Team. The mayor, in partnership with the Team Director and others in the mayor’s office, such as deputy mayors and communications staff, will undertake these steps.

A. UNDERSTAND KEY ROLES IN THE INNOVATION DELIVERY MODEL

The Innovation Delivery Team is not a typical entity in city government. It is partly an extension of the mayor’s office and partly a stand-alone consulting unit. The Team exists for one and only one reason: to help mayors and cities generate bold new ideas or approaches to solve big, pressing problems. A Team is successful when it leads colleagues in city government through a process to develop and then implement new solutions.

An Innovation Delivery Team should expect to work very hard, but it is the Team’s partners in city government (and in some cases, outside of it) who will actually put in place the solutions that are developed. The Team, therefore, must identify and work with these partners from the outset. Ensuring that this happens is the top priority for a new Team. With this in mind, what follows is a description of the central and indispensable players in the Innovation Delivery Model.

MAYOR

The mayor sets the tone for the entire venture. He or she:

- Makes clear that the success of the Innovation Delivery Team is a top priority
- Holds the Team, Director, and Initiative Sponsors accountable—but also supports them when individual initiatives do not work out
- Empowers the Team Director to make critical decisions, and makes it clear that he or she has the mayor’s trust and support
- Participates in stocktakes (see pg. 68) to demonstrate the importance of initiatives and targets to city stakeholders
- Is responsive to the Team when it identifies obstacles, and consistently engages senior department leaders and external partners (such as nonprofit service organizations) when the mayor’s intervention is needed
- Announces and celebrates the achievements of the Innovation Delivery Team, the department partners, and the overall plan
A. UNDERSTAND KEY ROLES IN THE INNOVATION DELIVERY MODEL

INITIATIVE SPONSORS

Initiative Sponsors, the department leaders who are accountable to the mayor for successful implementation of initiatives:

- See themselves as directly accountable for initiatives and view their success in delivering initiatives as a key component of their success as leaders
- Are actively involved in updates with the mayor and other internal meetings to ensure delivery of initiatives
- Strongly and publically support all of the initiatives in their departments
- Work effectively with their counterparts when initiatives raise issues that cross departments
- Commit the right people with the right skills to make initiatives a success (which may mean reprioritizing tasks to ensure that an initiative is implemented effectively)
- Participate in stocktakes and resolve issues in a timely way

INITIATIVE OWNERS

Initiative Owners, who are responsible for day-to-day implementation and oversight:

- Feel directly responsible for the success of an initiative and believe that their own success is tied to the initiative’s success
- Keep the Sponsor well informed and meaningfully engaged
- Focus doggedly on making progress toward milestones in the plan and proactively identify and resolve any obstacles as they arise
- Work seamlessly with Project Managers and lead initiative staff to achieve the desired results

Team members, especially Project Managers, tend to have deep relationships with Owners because they work closely together. When the Model is working best, the relationships between the Team and Initiative Owners have a healthy and unavoidable tension, as part of the Team’s job is ensure that Owners are accountable for achieving progress on initiatives.
INNOVATION DELIVERY TEAM DIRECTOR

As a senior city leader and the core champion of the Model, an effective Director:

- Actively generates new ideas—encouraging sponsors and owners to raise expectations and press for the development of new approaches
- Focuses relentlessly on impact: how initiatives perform against the plan, what stands in the way, and what needs to change in order to reach targets
- Provides insightful, practical recommendations to Project Managers about how to resolve difficult issues
- Keeps the mayor informed and engaged on key decisions and makes the most of his or her time by focusing on the most important issues
- Uses “soft power,” for example, appealing to colleagues’ interests to gain their cooperation or calling upon the mayor’s authority when necessary
- Ensures that department partners receive full credit when they achieve targets or otherwise succeed

INNOVATION DELIVERY TEAM PROJECT MANAGER

An effective Project Manager helps Initiative Sponsors and Owners succeed by:

- Acting as an independent assessor who not only tracks progress, but understands why some initiatives may not be working
- Offering practical advice and support to Initiative Owners as they confront barriers to change
- Coaching Initiative Owners (on problem solving, implementation strategies, and presentation skills)
- Being a “cheerleader” who ensures that the mayor recognizes departments’ achievements

B. CHOOSE AND COMMUNICATE PRIORITY AREAS

Choosing priority areas is the first step in applying the Innovation Delivery Model. The Model is best applied to advance the mayor’s top priorities, including those that cut across departments. So far, the Model has been successfully applied to a broad array of issues, ranging from reducing violent crime to improving customer service to promoting small business growth to reducing street homelessness.

In most cities, the list of economic, social, and government service problems is long—and the need for resources is great. Yet the efficacy of the Model may be diluted when the Team’s charge is overly broad. Successful Teams have focused on just one or two priorities at the outset. Like a consultancy, Teams are designed to move from one priority to another as they achieve their initial goals and as new priorities emerge.
B.1 DETERMINE PRIORITY AREAS

Priority areas can be determined with or without the input of the Team. In many cases, initial priority areas are chosen by the mayor and his or her staff before a Team is established. Cities can tap many sources to identify potential priority areas, including:

- **Administration priorities:** What are the mayor’s major ambitions for the city? What seems most difficult to accomplish? Which issues will require action from multiple departments to address?
- **Citizens’ priorities:** What problems have citizens raised repeatedly that the government has yet to fix? Are there issues that community groups would see as priorities? Some cities have experimented with public participation to identify the priorities of citizens more directly.
- **Internal stakeholders’ priorities:** What is the most critical priority for each department? Which of these require collaboration with other departments? What problems or processes do line staff think might prevent government from reaching its potential?

In most cases, and appropriately so, the mayor makes the final decision about how to deploy the Team.

B.2 COMMUNICATE PRIORITY AREAS

The mayor should begin building support for the Team’s work by sharing the priority areas within city government and explaining why they were chosen. (In some cases, it will also be appropriate to share the priority areas publicly.) This is an ideal opportunity for the mayor to meet with senior staff and department leaders to set expectations that significant progress on the priorities will be made, to explain why he or she is establishing the Team, and to communicate both the role of the Team and the value it can bring to the work of department leaders.
C. HIRE AND STRUCTURE THE TEAM

Innovation Delivery Teams include a Director, who reports to the mayor or chief executive, as well as at least one Project Manager assigned to each priority area. Sometimes, Team positions may require new budget lines; in others, existing lines may be repurposed to support Innovation Delivery Team staff. Key attributes of Team structure follow.

C.1 THE TEAM REPORTS DIRECTLY TO THE MAYOR

Teams are independent units reporting directly to the mayor. This structure gives the Team the flexibility and authority to work horizontally across departments and to avoid being limited by the assumptions and constraints of any one department.

An independent Team works directly with department leaders and employees to develop and deliver initiatives, but existing reporting structures remain in place and the Team neither reports to, nor has formal authority over, the departments.

C.2 WHAT TO LOOK FOR IN A DIRECTOR

The first hiring decision for an Innovation Delivery Team is its Director. This will likely be the most important staffing decision a mayor will make for a Team. The Director’s core responsibility is to run the Team—specifically, to manage Team members, build relationships with departments, coordinate closely with the mayor and key stakeholders, and take responsibility for the Team’s successes or failures. For this reason, the Director should be a strong strategic and critical thinker, able to drive change through collaborative partnerships, and able to manage and inspire staff.

Most directors have experience managing teams, familiarity with city politics, comfort working in bureaucratic environments, ability to multitask, and curiosity. The Director is the conductor of an expansive orchestra, setting the tempo, ensuring featured soloists shine, and weaving a unified symphony from disparate, often cantankerous sounds.

The profiles and backgrounds of Directors vary. The following exhibit shows sample backgrounds of existing Directors.
C.3 WHAT TO LOOK FOR IN TEAM MEMBERS

Directors of existing Innovation Delivery Teams highlight eight skills as critical to have represented on a Team:

- Project management
- Knowledge of city government
- Analytical capabilities (i.e., quantitative data analysis and qualitative investigation such as research, interviews, and observations)
- Creative thinking skills and the inclination to constantly challenge and test assumptions
- Problem solving and critical thinking
- Strong oral and written communication skills
- Ability to work with people at all levels of government
- Exceptional drive for impact

Project Managers should have demonstrated success and skills in the areas of project management (ushering a complex project through to completion), performance management (using data to assess and drive performance), and facilitation (organizing a structured, productive group conversation). It will be rare for any one person to be strong in all of these areas—but it is important for the Team, as a whole, to be strong across all of these areas. The exhibit on the following page shows sample backgrounds of existing Project Managers.
Project Managers must be quick learners who can rapidly get up to speed on any subject, because the Team’s first job is to dive quickly into the work and gain a deep understanding of the problem—by talking with and observing city management and staff, interacting with other key actors, conducting reviews of published research, and consulting with experts. Project Managers need not be experts in a given priority area, because Teams should expect to switch from one priority to the next as impact is achieved (or to work on multiple priorities at once). Indeed, in cities where issue experts have been hired to fill project management positions, Teams have struggled to find their footing. Hiring subject matter experts can send the message that the Team knows exactly what to do or has been brought in to carry out the implementation work. The goal of the Innovation Delivery Team is to support existing players in the city, not to supplant them.
C.4 HOW INNOVATION DELIVERY TEAMS ARE ORGANIZED

All Teams should be led by a Director and include at least one Project Manager per priority area. To ensure that all eight skills mentioned on page 13 are represented across the Team, cities and Directors may choose to create particular positions. Some Teams, for instance, hire analysts who are solely responsible for performance management and data analysis, while others let Project Managers handle those tasks. Some Teams hire junior staff to support Project Managers, while others make no such distinction. The following charts show two practical organizational schemes for Innovation Delivery Teams, though there are many others.

C.5 BRINGING TEAM MEMBERS ON BOARD

As Team positions are filled and new members come on board, many Teams have found it valuable to organize training around the Model and its application. Typically, Teams have asked new members to review the Playbook in advance of training and then discuss the core concepts and tools as a group. Parts of this training may be later extended to partners of the Team, especially future Owners and Sponsors.
D. PLAN TO MOVE QUICKLY

A core feature of the Innovation Delivery Model is pressure to succeed—on the mayor, city executives, the Team, and its partners. Pressure creates an environment in which action is expected and bureaucratic barriers can be overcome; ambitious and clear time goals help generate this pressure. While there is no set timeline for applying the Innovation Delivery Model to every priority area, the Model is one of quick action leading to real change on the ground, and works best when the mayor seeks to solve a problem within a specific, limited time frame. Generally speaking, a mayor starting a Team should expect at least some operational initiatives to be launched within six months.

It is recommended that an incoming Director and Team carefully review the Innovation Delivery Model and plan a rough time frame for the completion of key milestones. Potential milestones include:

- Challenges are defined (Step 1B)
- Key metrics (what is to be measured) for each challenge are chosen (Step 1E)
- Challenge targets are set (Steps 1E and 3E)
- A long list of potential initiatives is generated (Steps 2A and 2B)
- Initiatives are chosen (Steps 2A and 2B)
- Work plans for each initiative are established (Step 3D)
- The routines of delivery are begun (Step 4)

E. BUILD SUPPORT FOR THE TEAM

Department leaders may not immediately embrace the Model, and some may even see the Team as a threat, making the first communications vitally important. The Team is responsible for introducing itself to stakeholders and future partners around the city.

When doing so, it is helpful to reinforce that, as described in the Introduction, Teams are like in-house consultants, working closely with other senior staff members and departments but not managed by (nor managing) them. Teams complement the expertise and commitment of existing department leaders and staff, helping the administration reach new heights in areas of greatest concern. In addition, it is important to signal that it is the department leaders who will receive credit for success when innovative initiatives are launched and targets are achieved; the Team is a new resource to help them get there.

GET ENGAGED Right at the outset, therefore, the Director of the Team should expect to spend significant time introducing herself or himself and the Team to all relevant city departments.
This can be accomplished by speaking to many departmental heads (and senior-level staff such as deputy mayors) at once, or by visiting them for smaller group or one-on-one meetings. Either way, it will be helpful to have a ready-to-go presentation that explains the Team’s purpose, goals, and process to these partners-to-be. The key points in such a presentation might include:

- The Team will usher its partners through a four-step innovation and delivery process
- The Team reports to the mayor and is an extension of the mayor’s office
- The Team’s job is to help its partners accomplish ambitious goals
- The Team thinks of itself as in-house consultancy; the Team helps the work move along but does not do the work
- The Team will be with partners every step of the way, from understanding the root causes of a problem to implementing the solution designed to address it

Many Team Directors credit their success to having a broad, supportive coalition of leaders that they began building at the very start of the Team’s work.

**CONCLUSION**

The Team is ready to move forward and jump into the real work when:

- The priority areas that the Team will work on are established by the mayor and made known in city government, and the mayor has set clear expectations for progress among city leaders and explained the Team’s role
- The Director and most Team members are hired, and the Team and is structured internally and is set up to report to the mayor
- Team members are trained in the Innovation Delivery Model, and the mayor and Director have sketched out a rough timeline of important milestones
- The Team has worked hard to introduce itself within city government, explaining to department leaders and others how it will help them achieve meaningful impact on the mayor’s priority areas

When these tasks are complete, the Team has been established on firm ground and can proceed to the first core step of the Model, Investigate the Problem.
INVESTIGATE THE PROBLEM

A. BUILD RELATIONSHIPS AND COLLABORATE FROM THE START
B. CREATE A PRELIMINARY LIST OF CHALLENGES
C. WORK TO UNDERSTAND THE PROBLEM
D. FINALIZE CHALLENGES AND CONTRIBUTING ISSUES
E. SELECT METRICS FOR EACH CHALLENGE
Once priority areas are defined and Teams are in place, it is time to get to work. The first core step in the Innovation Delivery Model is to investigate the problem. This means moving from broad priority areas to specific challenges, learning deeply about the causes of these challenges, and determining how to measure progress.

Working with partners within city government, the Team will move through a broad and deep research process, becoming intimately familiar with the subject matter while also building relationships. All too often in government, there is an urge to jump straight to solutions. This urge should be resisted. Experience has shown that the value of gaining a deep understanding of the facts and data behind a problem before reaching for solutions cannot be overstated.

This chapter introduces several important terms that will be used throughout the rest of the Playbook:

### KEY CONCEPTS FOR STEP 1

<table>
<thead>
<tr>
<th>CONCEPT</th>
<th>DEFINITION</th>
<th>EXAMPLES</th>
</tr>
</thead>
<tbody>
<tr>
<td>PRIORITY</td>
<td>A broad, high-level area of focus identified by the mayor</td>
<td>■ Public safety</td>
</tr>
<tr>
<td>CHALLENGE</td>
<td>A specific problem within a priority area that the Team and its department partners hope to solve</td>
<td>■ The city is experiencing high numbers of homicides</td>
</tr>
<tr>
<td>CONTRIBUTING ISSUES</td>
<td>The causes of a challenge</td>
<td>■ Illegal guns on city streets; gangs; too few police officers on patrol</td>
</tr>
<tr>
<td>METRIC</td>
<td>A measurable unit that will be used to evaluate progress on the challenge</td>
<td>■ The number of murders as recorded by the police department</td>
</tr>
<tr>
<td>TARGET</td>
<td>The specific goal the Team and its department partners will try to achieve for a challenge</td>
<td>■ Reduce annual murders by 25% by 2015</td>
</tr>
</tbody>
</table>

Teams will first define challenges before conducting research on these challenges, identifying contributing issues, and, finally, determining how progress on challenges will be measured.
The philosophy behind this approach is that to develop effective solutions, big problems need to be broken down into concrete, addressable causes. Just as important, Teams must take care to bring others along with them as key conclusions are drawn about the causes of the problem at hand. Teams that approach the research process deliberately (which need not mean slowly), alongside key partners, will find themselves well positioned to:

- Develop initiatives that are focused on influential levers that can effect rapid change
- Avoid mistakes that others have made while attempting to address the problem
- Obtain high-level support for key initiatives

**A. BUILD RELATIONSHIPS AND COLLABORATE FROM THE START**

The process of carefully scoping the problem is a unique and powerful opportunity to strengthen the relationships you will need to successfully implement initiatives and achieve impact. As the work gets under way, it is important to remember that an Innovation Delivery Team is a tremendous resource, but it is not designed to accomplish change on its own.

**GET ENGAGED** The research stage is the Team’s first opportunity to “engage” potential partners, by working side by side to get to the heart of the challenge.

It is crucial for Teams to keep in mind that, ultimately, the Team does not implement initiatives—its partners do. These future Owners and Sponsors of initiatives must be engaged from day one.

**WHOM TO ENGAGE**

A Team’s partners will likely include everyone from the mayor to agency commissioners to line staff. In thinking about whom to engage, it may be helpful for the Team to consider the following questions:

- Who in the agencies is working on issues related to my challenge area?
- Who would be put off if a given item were put on his or her plate without discussion?
- Whose absence from an upcoming meeting would mean that we will be unable to move forward?
- Whose support might encourage key stakeholders to become more invested?

It is important to consult with senior staff familiar with the politics and interpersonal relationships at city hall to answer these questions.
The following table shows some typical examples of the kinds of partners engaged by Innovation Delivery Teams:

### SAMPLE INNOVATION DELIVERY TEAM PARTNERS

<table>
<thead>
<tr>
<th>IN CITY GOVERNMENT</th>
<th>OTHER GOVERNMENT</th>
<th>OUTSIDE OF GOVERNMENT</th>
</tr>
</thead>
<tbody>
<tr>
<td>Deputy mayor</td>
<td>School board official</td>
<td>Leader of a community group</td>
</tr>
<tr>
<td>Police chief</td>
<td>Director of county office economic development</td>
<td>Program officer at a local foundation</td>
</tr>
<tr>
<td>Police captain in charge of gangs</td>
<td>City Council member</td>
<td>Business owner or investor</td>
</tr>
<tr>
<td>Commissioner of Buildings</td>
<td>Prosecutor in the U.S. Attorney’s office</td>
<td>Committee leader on local chamber of commerce</td>
</tr>
<tr>
<td>Midlevel manager in the sanitation department</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Desk/line worker</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### SAMPLE CHALLENGE AREAS

- **Memphis.** Priority: Neighborhood economic development. Challenges: it is difficult for existing businesses to sustain and grow; the rate of new small business formation is low; blight and vacant commercial properties are extensive in certain neighborhoods.
- **New Orleans.** Priority: Public safety. Challenge: The murder rate is very high.
- **Chicago.** Priority: Reduce waiting and processing times for key city services. Challenges: Licensing processes are too complex; inspections are too burdensome for new businesses; the process of accessing city services is not user-friendly.

Experience suggests that the Team and its partners should select a limited number of challenges within a given priority area to ensure that the Team does not get spread too thinly. In some cases, one challenge may be broad and important enough to be the only challenge chosen. In most cases, however, there will be a number of challenges that a city will choose to tackle.
While some challenges will likely be quickly determined by the interests of the mayor, others may rise to the top as a result of the research process described in the next section. Some Teams, therefore, choose to create a list of potential challenges at this point that is intentionally long, and then whittle down that list after the research process.

It is important to note that challenges should always be defined as a specific problem—and never in a way that presumes a certain solution. For instance, “the city needs to create a one-stop shop for small business entrepreneurs” would not be an appropriate challenge. In contrast, “starting a small business in our city is a confusing, lengthy, and expensive process” would be a good starting point.

The following section describes a process to help Teams and agency partners research and understand challenges.

**C. WORK TO UNDERSTAND THE PROBLEM**

This section focuses on strategies to help the Team understand a new priority area. With a first list of challenges defined, the Team must now learn as much as it can about the causes of the challenges, what is being done today to address them, what is working and what is not, and whether and how other jurisdictions have made progress. Teams have found that devoting significant resources to this task, while working alongside partners in the city, establishes a firm foundation for the later development of initiatives.

While it is not until the next step of the Model (Step 2: Generate New Ideas) that the Team will work to gather and create ideas for new initiatives, it is all but certain that some ideas for initiatives will arise during the research phase. Successful Teams recommend creating an “idea log” and maintaining it through the completion of Step 2.

**C.1 ASSESS AVAILABLE DATA, CURRENT AND HISTORICAL**

It is important to determine the nature and extent of the data available to describe the challenges. For instance, if one challenge is related to foreclosures, you might be interested in knowing the number of foreclosures initiated within the city each month and by zip code. Generally speaking, data the Team desires will be in any of several states: currently tracked by a city agency; available from an outside source; not readily available but fairly easily compiled; or not available at all without significant work. While accurate, relevant data is key, don’t let the absence of perfect data deter you: accept that in some instances you will have to use problematic data or data that substitutes for what you would actually like to measure.

Many Teams start by taking stock of the systems—digital or otherwise—that the city uses to collect data that relates to the challenge at hand. Historical information (whether over the past few months or the past 20 years) can help answer key questions about trends and causes. Has the problem been persistent, or has it surfaced in the past several months? Is the problem accelerating, slowing down, or holding steady? When has the problem been most acute, and is there something that happened at that time to explain the uptick? Are there consistent patterns, such as seasonal effects, in how the data changes? Past data will also help establish a meaningful baseline against which future progress can be measured.
The following case study demonstrates how an analysis of trends in murder was an important step for the New Orleans Team.

TELLING THE STORY THROUGH DATA

Shortly after the formation of the Innovation Delivery Team in New Orleans, Team members began working collaboratively with the mayor’s staff to research historical trends in crime and policing in New Orleans and other cities, cross-referencing crime data to other data sets such as population density, as well as identifying successful violence reduction strategies from other jurisdictions. The work later expanded to include partners within the police department, who conducted a painstaking analysis of the circumstances of each murder that occurred within the last three years.

In addition to bringing key facts to the table, this analysis produced two important outcomes:

- The information played a “myth-busting” role in refuting the belief that New Orleans’s homicide problem was not driven by conflicts among groups. Although it was true that New Orleans did not have a “gang problem” when gangs were defined as large, complex criminal organizations, it turned out that the majority of murders in the city indeed resulted from disputes among smaller, more informal groups.

- The process introduced the Team to key colleagues in the mayor’s office and within the police department, and the Team gained an early reputation as brokers of honest, impartial analysis—helpful in breaking down barriers to working with partners in law enforcement.

Depending on your specific challenges, much of the data that would be helpful to you may not be collected by your city. In some cases, you might spot an opportunity to help city agencies to collect this data. For instance, imagine that a Team is interested in the average time between initial applications and the issuance of permits. The Team might work with agency staff to comb through a sample of past records to establish a baseline, and later institute new procedures to facilitate ongoing tracking.

In other cases, useful data sets may exist, but they might never have been analyzed. The following case study shows how the Memphis Team creatively used existing administrative data from a new source to provide the city with a fine-grained, ongoing look at the economic health of neighborhoods:

DEVELOPING NEW KINDS OF DATA

The Memphis Team was tasked by Mayor A. C. Wharton, Jr. with addressing the priority of “neighborhood economic vitality”—the economic health of depressed neighborhoods in Memphis. When the Team began its work, the city had no method for measuring commercial activity at the neighborhood level—yet the Team sought data to establish a working baseline and track progress. (Some census figures were available by zip code, but were not updated often enough to be helpful.) Expanding their list of potential partners, the Team noticed that the county had access to sales tax records for local businesses. The Team and the county worked collaboratively to develop a plan in which the county would aggregate and report commercial sales by city neighborhood each quarter, providing the city with new insight into the economic health of neighborhoods and the Team with new metrics upon which to construct ambitious targets for improving economic health.
C.2 UNDERSTAND CURRENT AND PAST EFFORTS

As the Team assesses the data landscape, it is important to compile a list of the activities in place today that address the challenges. The best way to do this is by interviewing relevant employees and examining documents. Guiding questions include:

- Are existing initiatives specifically aimed at this issue?
- What current programs are likely to affect this issue, even if not directly?

As the Team discovers current activities, programs, and initiatives that affect the challenge at hand, the Team should assess the effectiveness of these efforts by asking questions such as:

- What is the theory behind these activities/initiatives?
- Are these activities accomplishing their stated goals? (Do they have stated goals?)
  - If they are not successful, why not?
- Are there existing programs working so well that they should be expanded?

In some instances it may make sense to conduct "structured" interviews, in which multiple interviewees are asked the same questions, determined ahead of time.

In addition to interviewing, Teams also found these techniques helpful in learning about complex systems:

- **Shadowing.** Shadowing workers can help Team members and partners to quickly understand work flow, task distribution, and other details of the day-to-day experience of front-line workers. In Louisville, for example, where the Team was working to improve the city's emergency medical services, one of the first things the Team did was to accompany an ambulance unit on a ride-along. In addition to gaining valuable knowledge by learning from those responsible for emergency response operations on the ground, the Team was able to build trust and set the stage for productive, collaborative relationships. They learned to “speak the language” of the agency and signaled a willingness to get into the trenches.

- **Process mapping.** In some cases, it is helpful to graphically map out the work flow of a complex system, like a permit approval process. In many cases, such maps do not exist, and the work flow’s complexity may be surprising. Illustrating the work flow can make it easier to spot problem areas. Also, displaying the unintended complexity of a system might help to galvanize change.

Finally, it is often useful to conduct a careful examination of past efforts. Many issues are cyclical in nature. How did your city address a challenge in the past? Were there past successes you can learn from? What about lessons from past failures? In exploring these questions, the Team should work with colleagues in city agencies and departments as much as possible.

C.3 IDENTIFY CONTRIBUTING ISSUES

In the process of carrying out research, it is important to identify the “contributing issues,” or major causes, of each challenge. For example, if the city plans to focus on youth handgun violence, contributing issues might include easy access to guns, gang activity, a lack of services for high-risk youth, and so on. From the varied drivers of a particular problem, the goal is identifying which major causes of a challenge the Team and partners will seek to address and respond to with targeted initiatives.
To illustrate this core concept, Exhibit 1.4 shows some of the contributing issues the Chicago Team identified for challenges within the priority of Small Business Growth.

### EXHIBIT 1.4

<table>
<thead>
<tr>
<th>CHALLENGE</th>
<th>SAMPLE CONTRIBUTING ISSUES</th>
</tr>
</thead>
</table>
| LICENSING PROCESSES ARE TOO COMPLEX FOR USERS | ■ There are too many license types  
 ■ Many applications are incomplete, which can significantly delay a business’s launch |
| INSPECTIONS ARE TOO BURDENSOME FOR BUSINESSES | ■ New businesses are required to sit through too many inspection visits  
 ■ Businesses receive inconsistent messages from one inspector to the next  
 ■ There is no centralized scheduling system for inspections |
| THE PROCESS OF ACCESSING CITY SERVICES IS NOT USER-FRIENDLY | ■ There are too many required touch points with the city  
 ■ Many license and permit applications are not available online |

As you work to paint a clear picture of the causes of each challenge, there is no magic template or approach that will suit every Team. There are, however, some specific techniques that Teams have found helpful at this stage. A hypothesis tree can help a Team focus in on the particular contributing issues it is best positioned to influence. As illustrated in Exhibit 1.5, a “vacant and abandoned properties” challenge can be explained through many levels of contributing issues. Here, the Louisville Team determined that the issues highlighted in dark green offered the most promising opportunities for impact.
Additionally, working with end users—those who directly experience the challenge or service in question—can be a highly effective strategy for surfacing contributing issues. For instance, in seeking to understand the factors that have contributed to the proliferation of vacant and abandoned properties in a particular neighborhood, a Team might convene a focus group of neighborhood residents to get their take on the facts or events that precipitated the vacancies. A number of techniques for engaging with end users are described in Step 2: Generate New Ideas.

C.4 PLACE THE PROBLEM IN CONTEXT

Tough problems are often shared by other cities (or other kinds of governments or other sectors). Placing the challenges in context can help the Team understand the most important causes. Here are some research techniques that Teams have found useful for doing so:

- **Assess other cities**: To what extent does the challenge exist in other cities around the world? How does your city compare? What characteristics do cities that experience the problem share? What characteristics do cities that have avoided or mitigated the problem share?

  Identifying a group of cities that are similar to yours along a range of key characteristics (size, population, income, and so forth) may be a helpful first step.
As you learn more about other cities, the Team may find it helpful to reach out to its leaders to learn from their experiences. Telephone conversations are easy and valuable—even one conversation may lead to documentation, data, or details that are not possible to glean from an online search. Members of the Team should make every attempt to include departmental partners in such calls.

As a further benefit of reaching out, the relationships that begin to form with counterparts in other cities may lead to site visits to view specific programs firsthand, as discussed in Step 2: Generate New Ideas (see pg. 34).

- **Speak with outside experts:** It may be helpful to engage with subject matter experts from industry and academia (in addition to experts from your own city). Experts can bring a distinct perspective drawn from extensive research and tested lessons from the field.

- **Conduct a literature review:** The Team and its partners should search for literature analyzing the problem, its causes, and/or its solutions. Specific suggestions for conducting a careful literature review include:
  - Making use of full-textbook search tools, e.g., Google Books
  - Calling a professor or researcher at a local university
  - Asking people in other cities what they are reading
  - Conducting a review of academic journals, e.g., the *Journal of Criminal Justice*
  - Reviewing reports on effective strategies from research organizations such as RAND and Brookings

### D. FINALIZE CHALLENGES AND CONTRIBUTING ISSUES

As the research phase approaches completion, it is time to take stock of what has been learned, and to select a set of challenges and contributing issues.

### D.1 FINALIZE THE LIST OF CHALLENGES

Cities select challenges in different ways, but it is important that some criteria exist so that the city can explain why it is focusing on one challenge rather than another. In practice, there are many reasons for choosing one challenge over another, including:

- Assessment of potential impact on the lives of citizens
- Demand from citizens
- Difficulty of addressing the challenge
- Degree to which the challenge is best solved by city government
- Presence or absence of willing partners
- Mayoral priorities

---

**FROM A DIRECTOR:**

**TAKE ENTHUSIASM INTO ACCOUNT**

“When selecting among possible challenges, the likelihood of success is enhanced by the level of interest and enthusiasm of potential Sponsors and Owners. This includes a commitment by the Sponsor/Owner to provide resources needed for implementation.”
Regardless of how the Team manages the selection process, the best challenges will be genuinely important to the mayor, the Team, and the department leadership. Above all, Teams have found that the challenge must be measurable—so that you will be able to define goals and assess progress over time.

**D.2 PRIORITIZE AND SELECT CONTRIBUTING ISSUES**

The Team and its colleagues in agencies and departments cannot and should not address all of the possible contributing issues that feed a challenge. Rather, it is best to focus on the contributing issues that deliver the most “bang for the buck.” It is useful for the Team to facilitate a systematic prioritization process for contributing issues. Commonly used criteria for this choice include:

- For which contributing issues is there strong evidence of a cause-and-effect relationship between the issue and the problem? (As a general rule, use data as much as possible.)
- For which issues are there known solutions with a track record of success?
- Which issues can the city meaningfully address, given its resources and capabilities?
- Which issues are closest to the administration’s core objectives?
- Which issues are not already being addressed effectively (perhaps because they are cross-departmental in nature)?
- Which issues have a measurable impact on the challenge(s) and priority at hand?

By applying criteria like these, the Team and its partners can narrow their list of contributing issues for each challenge down to a short list that the group will address.

**E. SELECT METRICS FOR EACH CHALLENGE**

With challenges and contributing issues defined, the Team and its partners should turn their attention to targets and metrics. While it may feel early to set definitive targets, it is important to put a “stake in the ground” to signal to all stakeholders that measurable progress is the expected end goal.

**E.1 SELECT CHALLENGE METRICS**

For each challenge selected, the Team and its partners should choose at least one metric with which to measure progress. A metric is a specific quantity, proportion, or rate that can be measured at regular intervals. For instance, a metric for the challenge “customer satisfaction around the permitting process is low” might be “the number of complaints received per month.” Note that in this case there is an assumption that the number of complaints filed is a reasonable proxy for citizens’ negative impression of the permitting process. Indeed, many metrics will be proxies for the true “something” that you wish to track. Factors for selecting metrics should include: completeness, timeliness, and reliability of the underlying data, and the extent to which resources are available to routinely collect and compile the data.
The following are examples of challenge metrics used by existing Innovation Delivery Teams.

### SAMPLE CHALLENGE METRICS

<table>
<thead>
<tr>
<th>TEAM</th>
<th>PRIORITY</th>
<th>CHALLENGE</th>
<th>CHALLENGE METRIC</th>
</tr>
</thead>
<tbody>
<tr>
<td>ATLANTA</td>
<td>Street homelessness</td>
<td>There is a sizable population of homeless veterans</td>
<td>Number of homeless veterans on city streets</td>
</tr>
<tr>
<td>CHICAGO</td>
<td>Energy efficiency</td>
<td>Citizens are not investing in energy-efficient solutions</td>
<td>Energy use per residence in the city</td>
</tr>
<tr>
<td>LOUISVILLE</td>
<td>Customer service</td>
<td>Louisville citizens and businesses minimally recycle</td>
<td>Citywide proportion of waste recycled</td>
</tr>
<tr>
<td>MEMPHIS</td>
<td>Neighborhood economic development</td>
<td>It is difficult for existing businesses to sustain and grow</td>
<td>Total sales for all retail businesses in a target area</td>
</tr>
<tr>
<td>NEW ORLEANS</td>
<td>Public safety</td>
<td>The city's murder rate is too high</td>
<td>Number of murders per year</td>
</tr>
</tbody>
</table>

As the Team is selecting metrics, it is helpful to document and formalize a data collection plan. This plan specifies how each metric is to be compiled, collected, reported, and transmitted. For each metric, the plan should also specify the frequency of reporting, who is primarily responsible for collecting the data, and who is responsible for ensuring that the report is made.

It is not uncommon for challenge metrics to change over time, because one or more of metrics first chosen may prove unreliable or better metrics come to light. Successful Teams always adjust and improve as circumstances change.

---

**FROM A TEAM MEMBER: WHEN IT COMES TO METRICS, KEEP IT SIMPLE**

“Keep metrics as simple as possible. Ideally choose something the department is already tracking. You won’t make many friends if you create another layer of data collection unless you can really prove that it makes sense to do so beyond the work with the Team.”
### E.2 SET PRELIMINARY CHALLENGE TARGETS

A core element of the Innovation Delivery Model is setting targets and systematically tracking progress toward achievement. At this early stage, an important value of setting challenge targets is to raise a high bar as you move into initiative development in Step 2: Generate New Ideas. Later, these challenge targets will provide regular feedback as to whether efforts are working.

Teams, with their partners, should work to assign targets to each challenge. Targets require four things: (1) a metric; (2) a baseline; (3) the target itself; and (4) a time frame. For example:

#### THE FOUR COMPONENTS OF A TARGET

<table>
<thead>
<tr>
<th>PRIORITY</th>
<th>Sustainability</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHALLENGE</td>
<td>The rate of recycling among residents is too low</td>
</tr>
<tr>
<td>METRIC</td>
<td>Diversion rate (the fraction of total waste that is recycled)</td>
</tr>
<tr>
<td>TARGET</td>
<td>Increase the diversion rate from 50% to 70% in 18 months</td>
</tr>
</tbody>
</table>

Targets should be ambitious yet achievable. In thinking about what is achievable, consider:

- **What other cities have accomplished.** For example: City X increased its diversion rate by 30% in two years; we have a similar population, so we can too.

- **Best-guess estimations or “sanity checks.”** For example: the city owns 5,000 foreclosed properties. Of these, about 1,000 are salable. A new program to rent others has a realistic goal of 1,000, and 500 can be through various means. Therefore, a target of returning half these properties to productive use is a reasonable one.

- **Trends.** If, for instance, crime has gotten worse in your city, it may be an accomplishment to simply reverse that trend. Consider regional and national trends. If crime is falling nationally, you might expect your target to reflect that trend.
Targets at this stage should be considered preliminary. In fact, you may not be ready to set numeric targets now, but it is important at this stage to, at minimum, specify a metric and a direction for change. In all cases, targets should be set collaboratively with departments.

CONCLUSION

Teams have completed the first core step of the model when they have defined challenges for each priority, carried out a thorough research process to identify the causes and drivers of the challenges, prioritized the contributing issues to address, and set metrics (and possibly targets) for each challenge. The Team and its partners should have a clear sense of the data that are available to describe the problem; what experts, colleagues in city government, and possibly citizens think about the challenges; and how your city’s experience compares to other cities’ experiences. Using the results of the analysis conducted in this step as a foundation, Step 2: Generate New Ideas is about focusing completely on generating initiative ideas to address these problems.

FROM A DIRECTOR: DO NOT BE AFRAID TO ADJUST TARGETS

“Stress to the departments that the targets can be adjusted if necessary. The departments need to feel like the targets are lofty but achievable. If they don’t think they are achievable you will lose credibility and buy-in. By convincing them that they can be adjusted if it is proven that they were set too high, they will likely be more willing to try to reach them.”
GENERATE NEW IDEAS

A. LOOK ELSEWHERE FIRST
B. GENERATE IDEAS
C. END-USER-FOCUSED DESIGN
D. ADDITIONAL RESOURCES
With the research phase complete, the Team and its partners should have a firm understanding of the challenges in each priority area and the contributing issues. In this step, the Team and its partners will think as big and as creatively as possible to generate a full set of initiative ideas with outstanding potential.

The Team's explorations should begin with what has worked, and what is working, in other cities. In some cases, this review may surface solutions that are sufficiently robust to address the Team’s identified challenges. In other cases, the existing set of solutions may have inherent limitations that don't enable cities to usher in the kind of transformative change a mayor hopes to attain. These limitations might be related to older technologies, funding, and organizational silos, or even to perceptions about the kinds of resources, inside or outside of government, that are “appropriate” to bring to bear.

If past solutions the Team has discovered in its investigation phase are not big or bold enough to solve the city’s problem, it is time for idea generation. This chapter includes useful tools and techniques that public sector and other innovators use to bring people together to generate new ideas. As you'll see, one key feature of successful idea generation is tapping into the knowledge of end users (citizens who will be directly affected or served by the innovations). Another is to offer incentives that bring new voices into the idea generation discussion. The Team’s key objective is to create the space for its partners to step away from their daily work so they can rethink, reimagine, and ultimately capitalize on bold new possibilities.

As you work through Step 2, bear in mind that the Team’s ultimate role will not be to carry out the initiatives that result from this process. The responsibility for day-to-day implementation falls to the Initiative Owner, and that of ensuring resources and overall project success falls to the Initiative Sponsor. As you proceed through idea generation, consider the identity of the likely Owner and Sponsor of each idea. A key benefit of an inclusive idea generation process is that partners feel that they have created, or have shared in the creation of, the ideas they will be responsible for implementing.

Generating new ideas is an important process that requires time and structure. It is important to set expectations high and think as creatively as possible in order to devise the boldest ideas. A group brainstorming session or an afternoon of internet research does not suffice. The Team's job is to take its partners through a process that expands the sources of new ideas and opens up new possibilities. Here is a set of idea generation principles:

- Think big and come up with as many potentially great ideas as possible. Keep the good ones and don't be wedded to the bad ones.
- Great ideas can come from unlikely sources; use an “open innovation” model to hear from new voices.
- People directly affected by reform can have rich insights as you develop ideas. Rely on “customers” for input and feedback.
- If there's a great solution, it’s OK to borrow it or adapt it to local circumstances. Don't reinvent the wheel unnecessarily.

At the end of this chapter, resources for further reading are provided.
A. LOOK ELSEWHERE FIRST

Your research in Step 1 has likely uncovered work done by other cities to address challenges and contributing issues similar to those of your city. What other cities have done is the first place to look when searching for initiative ideas. Key questions to ask include:

- To what extent have others made progress on the issue you are working on?
- How have they done so?
- How might these solutions, or parts of them, be imported to your city?

When adapting an initiative that was successful elsewhere, it is important to understand the core elements of the program that drove success. In other words, what must you do change? As you seek to identify and learn about ideas to import, it is critical to speak directly with the actual designers and implementors in other cities. Popular accounts or case studies of successful work often omit key details and oversimplify—as may the implementors themselves. With this in mind, it is always best to speak with a range of people who have worked on the project.

The Team should attempt to speak with implementors from other cities in conjunction with departmental partners who may become Owners or Sponsors. It is best to prepare a list of questions in advance. While many questions will be program-specific, there are some generic questions that are often helpful to ask:

- What are the elements of a “minimum viable product,” the most bare-bones implementation that would still have a real impact?
- If you (the implementor) were to start again today, what would you change?
- What were your biggest obstacles to success and how did you overcome them?
- How did you define success and when did you know you had achieved it? What were the specific metrics you tracked?
- How much time elapsed between initial launch and measurable impact?
- How much did the program cost? Over what time frame?
- What is the essential difference between your program and Program X (a competing approach)?

In certain cases, visits to other cities can be extremely valuable. There is often no substitute for seeing initiatives in action and talking to implementors in person about what has worked best and what has been hard. Existing Teams derived tremendous value from site visits and were able to integrate lessons into new initiatives back home. Examples of visits conducted by Teams include:

- The Chicago Innovation Delivery Team visited San Francisco’s small business center.
- The Memphis Team observed an operational GunStat meeting in Philadelphia.
- The Atlanta Team participated in New York City’s annual homeless count.

FROM A TEAM MEMBER

“A great way to identify successful programs is to use data to find cities at the top of their field. For instance, we found the five cities with the highest recycling diversion rate and called each one. They were more than happy to talk to us.”
It is possible that surveying what other cities and sectors have done will yield enough good initiative ideas that it is not necessary to spend more time on idea generation. If you are confident these ideas will achieve substantial impact, proceed from here directly to Section C, End-User-Focused Design. If you feel that you have not explored the range of what is possible, or if you wish to supplement the lessons from elsewhere with further idea generation work, keep reading below.

**B. GENERATE IDEAS**

It is important to think big when generating fresh approaches. Teams should embrace the open innovation model—turning to everyone from citizens to business leaders to academics—to help generate bold solutions to city problems. This section describes three helpful methods for generating additional ideas: group brainstorming sessions, idea competitions, and expert roundtables. All three require the close participation of partners inside and outside of city government. Ideally, the Team’s role is mainly that of a facilitator, and partners conduct much of the actual idea generation.

Before employing any or all of these techniques, it is wise to ensure that the conclusions reached during Step 1—including the identification of challenges, data trends, contributing issues, and preliminary targets—are known by main stakeholders. With this in mind, the Team should plan to share research conclusions when employing any of the three idea generation strategies described below, at the beginning of each conversation or session.

**B.1 GROUP BRAINSTORMING SESSIONS**

Group brainstorming sessions are a powerful way to generate new ideas, but the right structure is important. These sessions are typically conducted over the course of several hours or a whole day, with around 15–50 participants, and one (or more than one) facilitator.

For Innovation Delivery Teams, group brainstorming sessions have two complementary purposes: to widen the field of potential ideas, and to deepen the participation of partners inside and outside of city government. The attendees at these sessions should be drawn from a variety of stakeholder groups including:

- City agency staff and executives
- Outside experts, consultants, and academics
- Members of community groups, local philanthropies, or not-for-profits that are deeply concerned about or involved with the challenges at hand

There is a vast array of potential approaches to group brainstorming. Based on the experience of practitioners and the pioneer Teams, there are six core elements that successful group brainstorming sessions often share:

1. **Clarity at the outset about objectives and ground rules.** Participants should be clear on why they are there, and what they are being asked to do. Ground rules should be established, including a philosophy of “no constraints” on potential ideas (for instance, “that would never work because it is too expensive”).

2. **Warm-ups or “thinking differently” exercises.** The first exercises of the sessions are not designed to generate real ideas, but simply to “get the creative juices flowing.” A typical example is asking the group for ideas about how to make the problem worse rather than better.
3. **Well-structured group work with good prompts.** Ideas are often generated most effectively in small groups, in a series of exercises. There are many ways to encourage participation, often involving common objects such as whiteboards, easels, and Post-Its. As a rule, effective group exercises are thoughtfully framed by a facilitator, time-limited, and involve every group member. Many Teams have found it helpful to organize idea-generating exercises around the contributing issues that have been identified, such as by repeating the same exercise for each major contributing issue.

4. **A collaborative winnowing down of ideas.** Starting in small groups and progressing to the larger group, selection of a short list of the most promising ideas should proceed collaboratively. There are several creative and fun ways to set up a selection-by-collective-voting process, including allowing each person to “star” his or her favorite ideas or deposit a token in a “piggy bank” for each idea; having each group rate a different group’s ideas; and setting up physical stations for ideas and allowing participants to vote by movement.

5. **Group development of the short-listed ideas.** The short-listed ideas are then discussed, critiqued, altered, torn down, and built back up by group discussion. Having concise summaries of the research findings from Step 1 on hand during this phase may be helpful.

6. **Ending with next steps defined.** The purpose of a group idea generation session is to expand the pool of ideas and draw partners into the process, and it is possible that none of the ideas generated during a given session will ultimately lead to initiatives. But participants should always leave the session with a clear idea of what will happen next in the larger process.

Practitioners agree that robust sessions require time, so it is important to reserve sufficient time.

---

**B.2 IDEA COMPETITIONS**

Competitions are a powerful way to generate new ideas. A number of Teams have used idea competitions to surface new approaches to persistent challenges.

Teams that administer competitions find it helpful to establish clear expectations for what should be submitted as a response. Not surprisingly, more detailed submissions tended to be the most valuable. Submissions should include a narrative description of the idea, a proposed timeline for implementation, a description of new resources required, and the expected impact. Some Teams have also found it useful to design a template for contest entries.

The Atlanta Team, for example, facilitated a competition among Cabinet members to collect fresh ideas about how to improve the city’s approach to customer service. The Team’s submission template (shown in Exhibit 2.1) was designed to be open-ended and encourage a wide range of ideas.

Following the submission deadline, the Atlanta Team hosted an “Ideas Summit” to review submitted ideas and assess the feasibility and potential impact of the best suggestions. The Team left the Ideas Summit with a collection of new ideas to weigh, prioritize, and strengthen. Soon after, the Team and its partners finalized a basket of initiatives, assigned targets, and developed a thorough implementation plan.

B.3 EXPERT ROUNDTABLES

Some Teams have organized expert gatherings to generate ideas and build consensus. These expert roundtables have included city staff members with relevant expertise and outside experts from academia, industry, and/or other cities. It is often helpful to designate a moderator to focus the discussion.

The Louisville Team, for example, identified knowledgeable managers from a range of city governments and invited them to Louisville to offer advice about a promising recycling strategy.

LOUISVILLE RECYCLING ROUNDTABLE

The Recycling Roundtable was a daylong session that brought in players from all across the waste management world: government representatives from other cities, solid-waste and recycling consultants, representatives from the local recycling industry, and various stakeholders from Louisville Metro government.

A great amount of planning went into the Roundtable. The Team conducted research to determine which cities had the highest recycling rates and which places had implemented the most innovative strategies. They then worked with local government colleagues to identify industry thought leaders. The Team carefully planned the agenda for the session and recruited a moderator to help make productive use of the time.

While it was extremely valuable to include national leaders in the development of Louisville’s recycling plan, it was equally important to have the right insiders at the table.

The Recycling Roundtable was a great opportunity for future Sponsors, Owners, and other department staff to network and share ideas with their peers in Seattle, Portland, and San Francisco—something typically reserved for national conferences. Critically, the Roundtable helped strengthen the working relationships between department leaders and the Team. The Team was able to bring new resources and attention to an issue the department staff cared deeply about. Following the Roundtable, Team members and their agency partners were charged up and ready to work together toward shared goals.

C. END-USER-FOCUSED DESIGN

Most ideas will reach a definable set of “end users,” a city government’s analog to a business’s customers. For example, the end users of street repaving are drivers, bicyclists, and pedestrians, and the end users of the city’s restaurant licensing service include small business owners. Designing services from the point of view of end users is a concept that has recently been recognized as crucial in the public sector. It often generates new approaches and also helps to avoid approaches that do not improve the experience of citizens beyond the status quo.

FROM A TEAM MEMBER:
KNOW WHEN TO STOP GENERATING IDEAS

“Beware: generating ideas is fun and very useful, but it’s easy to employ too many techniques and not actually move on anything. It’s not necessary to identify every possible idea out there—at some point, you have to say you’ve identified a sufficient set of solutions to move on to the next step. You can always build on solutions once you start implementing.”
This section offers techniques for engaging end users and benefitting from their insights.

End users can be engaged at many points along the idea generation path and can fully participate during the research work described in Step 1. While not a hard-and-fast rule, citizens are generally more helpful in clarifying the problems they face or evaluating potential initiatives than they are at advancing blue-sky idea generation, because they are less familiar with government’s capabilities. Teams have learned that it is not as helpful to ask end users “what do you want” as it is to ask questions that shine light on the issue of “what do you actually need?”

C.1 INFORMAL ENGAGEMENT

Learning from end users need not be a formal process. Teams recommend “getting out there and talking to people” as a highly valuable, often overlooked first step. For example, if you are working on mitigating food deserts (urban areas in which access to fresh produce is scarce), you might visit corner stores in affected neighborhoods and speak with shoppers to understand their decision-making processes or level of satisfaction with their choices. If you are working on reducing the number of shootings among young people, you might visit a prison and talk to those convicted of a shooting crime to better understand disputes that escalate to violence.

As with all research and idea generation activities, it is strongly recommended that the Team include departmental partners. A small team of one Project Manager and one partner is ideal for this type of informal research.

C.2 OBSERVATION

When behavioral change is the ultimate goal, structured observation can be a valuable source of insight into the nature of the problem as experienced by end users. For example, when the Chicago Team sought to understand how well the city supported small business owners, they spent hours as “flies on the wall” at City Hall’s Small Business Center. They observed how the line was organized, how fast it moved, and the kinds of issues that appeared to most frustrate Center patrons. They took stock at busy times and at slow times; they asked questions of the staff and the visitors along the way. Following these observations, a handful of ideas—new signage, an express lane—rose to the top as quick, implementable solutions. This type of observational or ethnographic research may be effectively carried out in partnership with an academic partner, or with the support of other sources of professional expertise.
C.3 FOCUS GROUPS

Focus groups are small group discussions that are centered on a specific topic. Focus groups are excellent vehicles for obtaining early feedback on potential changes to a city service. Predeveloped, “canned” questions structure the focus group discussion and allow for comparison of responses across multiple focus groups. Focus group participants need not be end users.

While focus groups are not typically appropriate settings for idea generation, they can help you test the rationale behind an initiative, or the method of implementation. Successful focus groups often share the following elements:

- Six to twelve participants
- One to two hours in length
- Four to eight scripted questions
- Capability to record the session

In addition to their utility in Step 2: Generate New Ideas, focus groups with end users can also be productively applied during the research phase of the work (Step 1: Investigate the Problem)—most often by asking end users about their experience with the problem at hand. For example, the New Orleans Innovation Delivery Team used focus groups with both police officers and young men at risk of violence to learn about the drivers of shootings and the impediments to reducing them. Similarly, the techniques of informal engagement and observation can be applied to scoping the problem, particularly to elucidating contributing issues.

C.4 RAPID PROTOTYPING

Rapid prototyping is a term borrowed from industrial engineering. The goal of rapid prototyping is to get the idea “off paper” as quickly as possible and into a setting in which it can be tested and refined in collaboration with end users. Rapid prototyping is therefore not used to generate a new idea; the goal is to create a live scenario to test the idea.

Prototyping is different from launching a pilot. While pilots can be extremely valuable in their own right, a prototype happens before the pilot stage, in rough (often mock) form. Rapid prototyping is a way to “live test” an idea. It generally involves end users (or, alternatively, partners role-playing as end users for the purposes of the exercise), and the goal is to create a living scenario in which the kernel of the idea can be tested.
For example, the Chicago Team used this technique to advance its restaurant start-up initiative:

**RAPID PROTOTYPING IN CHICAGO**

To deeply understand its priority area—helping small businesses start, sustain, and grow—the Chicago Team conducted an intensive period of research, including stakeholder interviews, focus groups, and a review of best practices in peer cities. Toward the end of this phase, the Team began to sketch out potential solutions to current licensing, permit, and inspection challenges.

The Team created “mock-ups” of some of the most promising solutions and organized a series of business roundtables to float early ideas past a target group of stakeholders, including business owners, commercial landlords, and building owners. For example, the Team drew up a brochure describing the purpose and key attributes of a possible “restaurant start-up” program, printed glossy, colorful copies in advance of the roundtable, and distributed them to roundtable attendees for feedback.

Obtaining feedback early in the process proved useful for the Chicago Team. Early feedback helped to adjust and strengthen the idea. One member of the Chicago Team noted: “Prototypes presented during this stage need not be perfect, fully formed, or decked out with fancy trimmings. A baseline level of information, framework, and presentation to represent what the solution could look like is all that’s needed to obtain initial reactions from constituents and stakeholders.”

The following is a picture of one of the restaurant start-up brochure prototypes.

**SIMPLIFIED INSPECTIONS PROGRAM**

**How Do I Enroll?**

- If you are opening a new restaurant, you are automatically enrolled in the program.

**How Does the Program Work?**

**SITE APPROVALS**

Meet with Zoning (City Hall Room 900) to obtain site approval and identify additional requirements (i.e. parking). Once you receive site approval from Zoning, you will receive a checklist of all licensing requirements for your business.

**APPLICATION REVIEWS**

Submit your building plans to Department of Buildings (DOB) for plan reviews, if applicable, and your license application to Business Affairs and Consumer Protection (BACP).

**CHOOSE INSPECTION PROGRAMS TO PARTICIPATE IN:**

- **For ROUGH inspections, choose between:**
  - Single team ROUGH permit inspection (electrical, vent, plumbing, and new construction) within 3 business days of request. Or
  - Separate ROUGH inspections for electrical, vent, plumbing, and new construction within 2 weeks of request.
- **For FINAL inspections, choose between:**
  - Single team FINAL permit inspection visit (electrical, vent, plumbing, and new construction) within 2 weeks of request. Or
  - Separate FINAL inspections for electrical, vent, plumbing, and new construction within 2 weeks of request.
- **For LICENSING inspections, choose between:**
  - Single team LICENSING inspection visit (BACP, DOB, Fire, and Health) within a 2-hour window. Or
  - Separate LICENSING inspections for BACP, DOB, Fire, and Health within an 8-hour window.

For any team inspections, we expect that you are prepared for the inspection visit by having all necessary personnel present and prepared for that visit. Unnecessary revisits will be charged $200.

**INSPECTION SCHEDULING**

- To schedule your inspection:
  - CALL: XXX-XXX-XXXX
  - EMAIL: XXXXXXX@CITYOFCHICAGO.ORG
  - VISIT: WWW.CITYOFCHICAGO.ORG/INSPECTIONREQUEST

You will receive a confirmation once your request is received.
D. ADDITIONAL RESOURCES

For more specific techniques to drive the generation of new ideas, we invite you to explore the following resources from leaders in the field of public-sector innovation:

- Nesta is a not-for-profit whose mission is to promote innovation across a variety of sectors in the U.K. The following link is to Nesta’s module for generating ideas. The module outlines techniques for creative and innovative thinking and discusses methods of bringing people together to foster idea generation. [https://openworkshop.nesta.org.uk/content/2-generating-ideas](https://openworkshop.nesta.org.uk/content/2-generating-ideas)

- Nesta also has excellent resources available to help guide the rapid prototyping process. Below is a link to Nesta’s framework for prototyping new ideas, which includes a checklist to ensure you are prepared to begin the process. [http://www.nesta.org.uk/publications/prototyping-framework](http://www.nesta.org.uk/publications/prototyping-framework)

- MindLab is a cross-governmental innovation unit which involves citizens and businesses in developing new solutions for the public sector. Be sure to explore MindLab’s Method Cards, which can be downloaded via the link on the right side of the page. [http://www.mind-lab.dk/en/methods](http://www.mind-lab.dk/en/methods)

- OpenIDEO is an open innovation platform for social good facilitated by IDEO, an international innovation consultancy and design firm founded in Palo Alto, California. The link below directs to an OpenIDEO’s introductory video on “gamestorming,” a set of best practices for innovative brainstorming techniques. [http://www.openideo.com/open/creative-confidence/inspiration/stop-brainstorming..start-gamestorming/](http://www.openideo.com/open/creative-confidence/inspiration/stop-brainstorming..start-gamestorming/)

- McKinsey & Company is a leading management consulting firm that specializes in solving high-level organizational management issues. “Seven Steps to Better Brainstorming” is an article from their *McKinsey Quarterly* publication, and acts as a guide for organizing efficient and effective brainstorming sessions. [http://www.mckinsey.com/insights/strategy/seven_steps_to_better_brainstorming](http://www.mckinsey.com/insights/strategy/seven_steps_to_better_brainstorming)

- This handout from the University of Minnesota about brainstorming includes ideas for “provocations” and “what-if” exercises. [http://www.me.umn.edu/courses/me2011/handouts/brainstorm.pdf](http://www.me.umn.edu/courses/me2011/handouts/brainstorm.pdf)
CONCLUSION

At the end of Step 2, a Team should have a list of promising initiative ideas. These ideas may have come from a variety of sources including data analysis, other cities, experts, group brainstorming sessions, idea competitions, and end-user engagement. Every idea, or course, should be grounded in the contributing issues developed in Step 1.

Before proceeding to Step 3: Prepare to Deliver, the Team should ensure that each potential idea is described as clearly as possible. Also consider the entire set of potential initiatives. Are most ideas centered on one contributing issue? Unless one contributing issue is clearly the major cause of a challenge, it is not wise to place too many eggs in one's proverbial basket. The final list of potential initiatives should ideally include a diverse range of potential Sponsors, mechanisms of action, contributing issues addressed, and times to impact.

Teams should expect to eventually return to Step 2, whether because new ideas are needed to facilitate course corrections or because the Team is assigned an entirely new priority.

Next, in Step 3: Prepare to Deliver, the Team and its partners will select a portfolio of initiatives after each potential initiative is subjected to careful scrutiny and development.
PREPARE TO DELIVER

A. SELECT INITIATIVES
B. SET PRELIMINARY INITIATIVE TARGETS
C. GET AGREEMENT ON THE CORE COMPONENTS OF INITIATIVES
D. DEVELOP INITIATIVE WORK PLANS
E. FINALIZE ALL TARGETS
F. DEVELOP A COMMUNICATIONS STRATEGY
Step 3 focuses on turning the innovative solutions that were generated in Step 2 into concrete initiatives that are ready for delivery.

This process is iterative, with multiple drafts and revisions, and is conducted in close coordination with partners. Part of the process is selection: not all initiative ideas generated in Step 2 will become initiatives.

As you move forward through this step, the roles of the Team’s partners in city departments (or elsewhere) who have traveled with you on the path through research and idea generation will be formalized. The Initiative Owner is responsible for managing the day-to-day implementation of the initiative, while the Initiative Sponsor, more highly placed, is ultimately responsible for its success. These and other key terms are defined below.

### Key Concepts for Step 3

<table>
<thead>
<tr>
<th>Concept</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Initiative Owner</td>
<td>The department staff member responsible for day-to-day implementation. He or she will work closely with a Project Manager from the Innovation Delivery Team to achieve the desired impact. The Team should identify an Owner for each initiative as early as possible. Ideally, Owners-to-be will have been closely involved throughout Steps 1 and 2.</td>
</tr>
<tr>
<td>Initiative Sponsor</td>
<td>A city leader (e.g., a commissioner or deputy mayor) who can strongly support initiatives, coordinate changes in his or her department and across departments, and provide resources and support to address implementation challenges. Sponsors are accountable for the success of the initiative (i.e., finding the right people, the right resources, the right support). Each initiative should have one Initiative Sponsor from a city department, even when multiple departments are involved in an initiative.</td>
</tr>
<tr>
<td>Logic Model</td>
<td>A tool to aid in the development of an initiative and ensure that the actual activities will lead to concrete, measurable outcomes linked to your challenges.</td>
</tr>
<tr>
<td>Initiative Target</td>
<td>A specific, measurable goal that the Team and its department partners will try to achieve for an initiative, within a certain time frame.</td>
</tr>
<tr>
<td>Charter</td>
<td>A concise, thoughtfully laid out document that records an initiative’s aims, activities, the key people responsible, and measures of success. Charters are living documents intended to be referenced (and changed, when necessary) throughout an initiative’s life.</td>
</tr>
</tbody>
</table>
A. SELECT INITIATIVES

After completing Step 2, you should have a list of potential initiatives—likely greater than the number that can reasonably be implemented. This section outlines a series of steps to whittle down the list to a smaller set positioned to deliver real impact.

A.1 DEVELOP LOGIC MODELS

To determine which initiatives are best positioned to achieve their intended impact, Teams have found it helpful to construct logic models for each potential initiative. For example, in Louisville, the Team wanted to test its thinking about how an initiative focused on distributing larger recycling carts fit into the city’s overall efforts to increase the volume of residential recycling. Below is a depiction of the logic model created by the Louisville Innovation Delivery Team in collaboration with the Initiative Owner.

### LOGIC MODEL EXAMPLE

<table>
<thead>
<tr>
<th>INITIATIVE</th>
<th>Resident Recycling Carts</th>
</tr>
</thead>
<tbody>
<tr>
<td>OBJECTIVE</td>
<td>Increase resident recycling tonnage</td>
</tr>
<tr>
<td>CHALLENGE</td>
<td>Too few households, businesses, and individuals reduce, reuse, and recycle</td>
</tr>
<tr>
<td>MAJOR CONTRIBUTING ISSUE</td>
<td>Current bins are not user-friendly</td>
</tr>
<tr>
<td>RESOURCES REQUIRED</td>
<td>Subsidizing the cost of carts; funding the collection of data on collection and cart purchases.</td>
</tr>
<tr>
<td>ACTIVITIES</td>
<td>Move from 18-gallon bins to 95-gallon carts; pilot in an eco-friendly district and in a district with low participation rates.</td>
</tr>
<tr>
<td>OUTPUT MEASURE(S)</td>
<td>Number of recycling carts purchased by citizens.</td>
</tr>
<tr>
<td>OUTCOME MEASURE(S)</td>
<td>In test districts, recycling tonnage collected per week.</td>
</tr>
<tr>
<td>IMPACT ON CHALLENGE TARGET</td>
<td>Residential recycling is a significant portion of all recycling; if tonnage collected increases by a substantial amount, a citywide rollout would have a notable impact.</td>
</tr>
</tbody>
</table>

A logic model is a tool that lays out the reasoning that underlies and justifies a specific initiative, explicitly connecting the initiative to its desired impact on the challenge target. If Teams find it difficult or impossible to make this connection when creating a logic model, it is a strong signal that the initiative is not suitable for selection.
There are four key components to a logic model:

- **Resources:** What staff, funds, or resources are required for implementation?
- **Activities:** Fundamentally, what tasks will be carried out?
- **Outputs:** Evidence that activities have been carried out as planned and the initiative is functioning.
- **Outcomes:** Evidence that initiative activities have caused a desired change.

In constructing a logic model, it is important to distinguish between outputs and outcomes. While measurement of outputs answers the question “are we doing what we planned to do?”, measurement of outcomes answers the question “are the changes we’ve implemented having the desired effect?” (Looking beyond outcomes, challenge metrics serve as larger impacts, as shown above.)

The creation of a logic model is an exercise that should position you to answer key questions about each potential initiative, including:

- Is it clear what activities constitute the initiative?
- Is there a logical connection between initiative activities and the desired outputs and outcomes?
- Are the desired outputs and outcomes measurable?
- If the desired outcomes are achieved, will this initiative make a meaningful contribution to achieving the overarching challenge target?

For each potential initiative, Teams should work with the likely Owner to develop the logic model. Once a logic model is drafted, it may also be helpful to walk through the model with the potential Sponsor.

### A.2 PRIORITIZE AND SELECT INITIATIVES

With logic models in hand, the next step is to prioritize and select from the list of potential initiatives. Innovation Delivery Teams have found it helpful to prioritize along two dimensions: degree of potential impact and feasibility of implementation. While the Team can lead this prioritization exercise, it is important that agency partners, particularly those who will be integral to implementation, are front and center.

Consideration of impact is intuitive and straightforward: how big is the effect we expect from this initiative? To assess an initiative’s feasibility, consider whether there is a real and practical pathway for getting the initiative off the ground. The resources and activities boxes of your logic model are great starting points for feasibility analysis. Important questions include:

- Financial feasibility: Does the initiative require new investment? Does it fit the budget? If not, are there other ways to fund the project?
- Operational and legal feasibility: Is this something the city will actually be able to do? The Team will often have to push against the status quo, researching barriers before accepting that they cannot be overcome.
- Political and social feasibility: Are there political considerations that would prevent the initiative from being viable? Would the initiative be acceptable to the public?
- Is there a “home” for this initiative? Are there people who would supervise and/or carry out the work, and are they and their supervisors willing to commit their time and effort?
It is important to note that “not feasible” can also be code for “not how we do things” or “too much effort.” The Team needs to be able to push partners beyond their comfort zones and differentiate between real implementation barriers and mere perceptions, reluctance, or bureaucratic resistance.

Teams and their partners may find it helpful to develop criteria for scoring impact and feasibility. For instance, in Exhibit 3.3, we show impact and feasibility criteria that the Louisville Team used to evaluate potential recycling initiatives.

### SAMPLE IMPACT AND FEASIBILITY CRITERIA

**LOUISVILLE TEAM: POTENTIAL RECYCLING INITIATIVE CRITERIA**

<table>
<thead>
<tr>
<th>IMPACT</th>
<th>FEASIBILITY</th>
</tr>
</thead>
<tbody>
<tr>
<td>■ Increase diversion rate</td>
<td>■ Increase employee safety</td>
</tr>
<tr>
<td>■ Visibility / raise awareness</td>
<td>■ Reduce costs</td>
</tr>
<tr>
<td>■ A greener image for the city</td>
<td></td>
</tr>
<tr>
<td>■ Decrease employee safety</td>
<td>■ Funding</td>
</tr>
<tr>
<td>■ Political support</td>
<td>■ Staffing requirements</td>
</tr>
<tr>
<td>■ Time needed to implement</td>
<td>■ Requires changes to regulations</td>
</tr>
<tr>
<td>■ Measurable impact</td>
<td>■ Convenient for end users</td>
</tr>
</tbody>
</table>

To systematize the process of prioritization, you may find it helpful to score each initiative along the two dimensions of impact and feasibility, and then visualize the results by plotting the initiatives and scores onto a grid, as shown in Exhibit 3.4. The highest-impact and most feasible initiatives will congregate around the upper right-hand corner.
The Team and its partners may not wish to choose only high-impact, high-feasibility initiatives. In some cases, there may be an argument to take on a few initiatives that may be difficult to implement but high impact (high risk, high reward), or lower impact but relatively easy to implement (“low-hanging fruit”).

In the latter category, swiftly implementable initiatives—“quick wins”—may have disproportionate value because it takes less time to achieve impact. For example, the New Orleans Innovation Delivery Team, tasked with improving customer service, noticed that “walk-in” zoning requests—citizens traveling to city hall to inquire about the zoning status of a parcel of land—consumed a substantial amount of citizen and city staff time. Building on this insight, the Team helped organize an effort to digitize the existing zoning maps and create an online tool that allows citizens to view the official zoning layer without visiting city hall. Though modest in impact, this initiative was completed quickly, with visible, tangible results, signaling internally and externally that the Team’s work leads to success.
A.3 CONFIRM THE INITIATIVE OWNER AND SPONSOR

The Owner and Sponsor should have emerged during the initiative’s conception and development. At the point of initiative selection, Teams have found it important to receive a firm commitment from the presumed Owner and Sponsor. Teams should question the feasibility of a particular initiative if they do not secure a firm commitment. Experience has demonstrated that moving ahead without a clear Sponsor and Owner who can “find a home” for the initiative once it is up and running is risky, compromising the team’s model as well as the initiative’s ultimate success. In some cases, it may be helpful to involve the mayor to confirm expectations around a potential Owner or Sponsor’s charge with respect to an initiative.

B. SET PRELIMINARY INITIATIVE TARGETS

Measuring an initiative’s progress toward expected outcomes is at the heart of an Innovation Delivery Team’s work. It is important to identify at least one target for each new initiative. A target is based on metrics and is time limited, meaning that there is an explicit expectation regarding when the target is to be achieved. For example, one of the Atlanta Team’s initiative targets was housing 400 homeless veterans over 18 months. The Team measured progress by tracking the metric “number of homeless veterans placed in permanent housing” every month.

B.1 DETERMINE THE BEST METRICS TO TRACK

Successful delivery requires good data. Many Teams reported that a notable contribution to their cities was establishing routines to collect and analyze data and measure progress.

A good metric has five qualities: it is simple, measurable, actionable, relevant, and timely—summed up as SMART.

- **Simple:** City workers and citizens will quickly understand simple, straightforward metrics. This will increase their engagement and improve delivery. Generally, the simpler the outcome metric (e.g., gun-related homicides per capita), the better.

- **Measurable:** It must be practical to obtain the data you wish to measure. Teams are often tempted to find the “perfect” measure of impact, but a perfect measure can be difficult or costly to gather. Metrics already used by the city are usually faster and cheaper and have a trend history, but they may measure only part of an initiative’s impact or include complicating factors. Successful Teams balance these considerations and avoid letting the perfect be the enemy of the good.

- **Actionable:** A metric should measure something the initiative can affect. When an actionable metric does not change as expected, corrective action (for example, adjusting the implementation strategy) can be taken.

- **Relevant:** A metric should be narrow enough to discern whether the initiative or some other factor triggered changes. For example, life expectancy may be too broad a metric for a nutrition-focused initiative. In some cases, metrics will need to be localized to a particular place (e.g., accidents in a particular neighborhood). The metric should also have clear links both downstream to initiative activities and upstream to the challenge target.

- **Timely:** Metrics should show change reasonably quickly, allowing the Team to determine if an initiative is working. Some promising data sources may contain rich and relevant information, but be compiled too infrequently to demonstrate change (or lack thereof) in time to implement course corrections.
SMART metrics should measure outcomes, not outputs. Please refer back to completed logic models (see pg. 46) to further understand the distinction.

An example of a SMART metric used by the Louisville Team is outlined in the table below.

### A. SELECT INITIATIVES  \B. SET PRELIMINARY INITIATIVE TARGETS  \C. GET AGREEMENT ON THE CORE COMPONENTS OF INITIATIVES  \D. DEVELOP INITIATIVE WORK PLANS  \E. FINALIZE ALL TARGETS  \F. DEVELOP A COMMUNICATIONS STRATEGY

---

**B.2 AGREE ON AN AMBITIOUS BUT ACHIEVABLE TARGET**

Once a Team chooses the right metric, it can establish a baseline, set targets, and map a path to achieve targets. A good initiative target must be ambitious, helping to make meaningful progress toward the overall challenge target, which may require pushing city partners beyond their comfort zones. It must also be achievable, so that internal and external stakeholders see it as credible.

It is important to establish a baseline against which to measure progress. It is also important to determine how the metric would be expected to change in the absence of the initiative. This process involves asking questions including: How has the metric changed recently, and why? Besides the new initiative, which factors are likely to affect the metric? Over what period (days, months, quarters, etc.) does it make sense to measure progress?

---

<table>
<thead>
<tr>
<th>METRIC</th>
<th>NUMBER OF PROPERTY TITLES FROM VACANT OR ABANDONED PROPERTIES TRANSFERRED TO CITY OWNERSHIP</th>
</tr>
</thead>
<tbody>
<tr>
<td>SIMPLE</td>
<td>The concept of the city taking title of a “vacant and abandoned property” is well understood by city employees and everyday citizens alike.</td>
</tr>
<tr>
<td>MEASURABLE</td>
<td>The number of titles that are transferred to city ownership are tracked monthly by the city.</td>
</tr>
<tr>
<td>ACTIONABLE</td>
<td>If the number of title transfers remains steady or decreases, despite the introduction of initiatives designed to increase the number of transfers, the Team would have cause to revisit the initiatives’ implementation methods or explore new ways to address the problem.</td>
</tr>
<tr>
<td>RELEVANT</td>
<td>This metric sheds direct light on whether initiatives are collectively leading to the intended impact.</td>
</tr>
<tr>
<td>TIMELY</td>
<td>An increase in the number of title transfers should be detectable as soon as process improvements are implemented.</td>
</tr>
</tbody>
</table>
Setting a target is an art and a science. Mayors routinely set aspirational initiative targets; the Team’s responsibility is to test those targets to ensure they are optimistic but achievable given the resources available. To test a target’s suitability, the Team might compare it to analogous efforts within the city or other cities.

**B.3 CONFIRM THE TARGETS YOU HAVE SELECTED**

With targets established for all potential initiatives, it is time to check the credibility of the plan as a whole: can the initiatives, assessed together, achieve the challenge target? (Or, if a firm challenge target has not yet been established, can the initiatives make a notable impact on the challenge metrics?) In some cases, this will be a simple matter of addition: if, for instance, your overall challenge target was reducing carbon emissions, you could add up the projected reductions from each initiative. In most cases, it is not this simple, and the assessment of the future impact of a set of initiatives is an educated (hopefully, quite highly educated) guess. Some questions to consider include:

- Which initiatives, if any, must succeed in order to achieve the challenge target?
- What is your judgment of the risk of failure of these initiatives?
- What key assumptions have you made that must prove to be true in order to achieve the target?
- What is the likelihood that these assumptions are false?

Another helpful exercise is to work through a logic model at the challenge level, replacing the “activities” box with an “initiatives” box, listing all the initiative targets as outcome measures, and judging whether their combined impact on the challenge target will be sufficient.

Teams should not carry out this assessment alone. Successful Teams have worked with Sponsors, stakeholders, and experts to solicit feedback and “kick the tires.”

If the combined effect is judged to fall short of the overall target, there are two options: reduce the challenge target or change the list of initiatives (their number, resources provided, etc.).

In some situations, there may be good reason to believe that the combined effect of several initiatives will be greater than the sum of their parts. This does not eliminate the need to establish an informed hypothesis around each initiative’s expected impact.

**B.4 SET TRAJECTORIES**

Sometimes an initiative will require a protracted ramp-up period; impact is rarely instantaneous. It can be challenging for Teams to keep stakeholders committed and engaged when the payoff is months away. To mitigate this challenge, high-performing Teams manage expectations of when to expect progress. In this regard, Teams have found it valuable to outline a “trajectory,” an estimated path toward achievement of targets, before implementation begins (see Exhibit 3.6). An expected path can also help the Team to spot opportunities for course correction or retreat, allowing the mayor to hold Sponsors accountable if impact does not meet expectations.
Several factors tend to drive a metric’s trajectory:

- **Time lag of the change:** Sometimes, there is a delay between the intervention and expected impact. This affects the projected trajectory.

- **Responsiveness to change:** Some policy areas can be more intractable than others, with change happening more slowly. Other cities’ experiences can help to predict the pace of change.

- **Tipping point:** Some initiatives, particularly those relying on social or behavioral changes, may need to reach a critical mass before they have a large-scale impact.

- **Diminishing returns:** Improvements are often easier to achieve (and measure) when starting from a low baseline. It may be easier, for instance, to achieve a 10% increase if the current rate is 50% rather than 80%.
C. GET AGREEMENT ON THE CORE COMPONENTS OF INITIATIVES

In city government, each new day brings new fires to extinguish and crises to manage; distraction is the status quo. In this environment, difficult reform efforts that take time to implement and generate impact can lose people’s attention and become victims of “mission drift.”

Teams have found that documenting the purpose, goals, targets, and key tasks associated with initiatives from the outset can be a powerful tool for maintaining collective discipline and focus over time. This agreement—often called the initiative “charter”—unites the Team and its partners around a common mission. They often return to the charter frequently to check progress, test assumptions, and identify fundamental changes. The charter functions as a living document that is updated during delivery.

C.1 KEY INITIATIVE COMPONENTS TO AGREE ON

Teams should work with partners to, at a minimum, clearly describe objectives, confirm responsibilities, identify necessary resources, and establish a time frame. Six questions every charter should address are:

1. **What are the initiative’s objectives?** Objectives are broad goals, which can be anything from impact on a challenge (e.g., improving the permit approval process) to changing how government works (e.g., merging several services to create efficiencies).

2. **Who is the Initiative Owner?** The Owner is responsible for day-to-day implementation.

3. **Who is the Initiative Sponsor?** The Sponsor is accountable for the success of the initiative.

4. **What budget and/or resources are required?** This refers to the funding and personnel required to support the initiative. Resource projections should reflect the city’s overall budget process and constraints, as well as the possibility of philanthropic resources.

5. **When is the expected launch?** This refers to the time an initiative is expected to be implemented.

6. **What are the initiative targets?** This refers to the measurable improvements the initiative is expected to achieve, and when.
Exhibit 3.7, below, presents a charter developed by the New Orleans Team in collaboration with its agency partners.

### NEW ORLEANS CHARTER

An initiative charter provides an overview of an initiative. The above example is from the New Orleans Innovation Delivery Team.

### C.2 DEVELOPING A CHARTER

Drafting a charter is often the first task assigned to an Initiative Owner, who develops and tests early drafts with support from the Innovation Delivery Team. Alternatively, the Team can take the lead, working with Owners to draft a charter.

The first draft of the charter should be circulated among stakeholders, including department leaders, city experts, budget offices, and department partners. The aim is to build broad buy-in from these stakeholders—which often requires changing the charter based on their input. Testing and revising the charter will bring clarity to its interrelated parts. For example, the resources dedicated to an initiative will almost certainly affect the timeline, number of staff involved, and expected impact. The revision process nearly always yields a more detailed, thoughtful, and realistic plan.
**D. DEVELOP INITIATIVE WORK PLANS**

After agreeing on the core components of an initiative, the next step is developing a structured implementation plan, which provides greater detail. Although Initiative Owners typically develop the plan, the Team should help to structure it by introducing tools, problem solving, and testing drafts to ensure that the final plans are comprehensive, accurate, realistic, and ambitious.

**D.1 IDENTIFY THE INITIATIVE’S KEY WORKSTREAMS**

The first step is to compartmentalize an initiative into discrete workstreams—the categories of tasks that must be done to implement the initiative. One way to identify workstreams is to describe what success looks like and then figure out all of the discrete tasks required to achieve success. For example, to build a house you need to hire workers, acquire materials, create a blueprint, apply for and receive permits, purchase land, and undertake the actual construction. Each of these tasks is a workstream.

Each workstream should have a point person; he or she is generally a department staff member with relevant experience. Depending on the size of an initiative and scale of a workstream, a point person might work on it full-time, or it could become part of his or her broader responsibilities.

Each workstream should have at least one clear output and a clear timeline (including the projected date of completion). Some workstreams can start only once others are completed (e.g., workers cannot start building until they have materials), while other streams may be interrelated (e.g., a permit may require changes to the house’s blueprint). A good implementation plan takes these relationships into account in the overall timeline.

This tool maps out when workstreams will start, and when they will be completed. Workstreams start at different times based on resources and interdependencies.
D.2 DEVELOP A DETAILED IMPLEMENTATION PLAN

Most workstreams include multiple actions, so a complete implementation plan will include further detail. To continue the earlier example, the final step of constructing the building might include specific actions such as laying the foundation, putting up the frame, installing plumbing, and so on. Actions are often interrelated (e.g., lay the foundation before putting up the frame) and should have their own time frames and outputs. Bigger and more complex initiatives will benefit from more detail in planning, such as laying out subtasks with tasks, mapping dependencies across tasks (e.g., Task B cannot begin until Task A is completed), and a method of tracking the status of each task. To accomplish this, some Teams use dedicated project-management software such as Microsoft Project (there are also low- or no-cost alternatives), while others rely on detailed spreadsheets or documents.

TOOLKIT
A template for constructing detailed work plans can be found in the Toolkit.

D.3 MAP INITIATIVES ONTO A SINGLE CALENDAR

When multiple initiatives are being delivered concurrently, it can be useful to put all initiatives for one challenge onto one master calendar. This will help highlight interdependencies between initiatives that individual initiative plans may not have considered, indicate when the Team and department partners may be busiest, and suggest when the mayor may need to be particularly involved.

</tr>
</tbody>
</table>

A single calendar can highlight initiatives and key workstreams for an entire challenge, as this example from Chicago shows.
Teams should resist any temptation to create charters and work plans alone, although this might seem quicker and easier in the short run.

**GET ENGAGED** Many of the work products described in Step 3 are perfect opportunities for the Team to roll up its sleeves and work closely with future Initiative Owners.

For example, the logic models described in Section A may be most easily drafted in small working meetings between Team Project Managers and agency partners. In such settings, Project Managers should do their best to act as guides while facilitating engagement with the process by asking the right questions to move things along.

There are simple steps that Project Managers can take to improve relationships with partners. Actions as simple as circulating drafts for feedback or generating a list of questions for partners to answer can improve the process for the Team and its partners.

Although it is often harder in the short run, a true commitment to bringing your colleagues in city government along with the Team on the road to new initiatives will pay off many times over during implementation and delivery.

**E. FINALIZE ALL TARGETS**

With work plans developed, it’s time to revisit initiative charters and trajectories to make sure they remain accurate and achievable. It may make sense to revise targets at this time, based on a deeper understanding of the work ahead.

Similarly, with initiatives chosen and mapped out, this is also the right time to revisit and finalize challenge targets and timing.

The mayor and key Sponsors should explicitly sign off on the targets.

**F. DEVELOP A COMMUNICATIONS STRATEGY**

The city may wish to publicize the Team’s innovative efforts to address mayoral priorities. The Innovation Delivery Team Director should work with the mayor’s communication staff, and with key stakeholders, to develop a public communications plan. While most planning will not get under way until initiatives are gearing up to launch, items to consider are:

- Estimated dates for initiative launches and press releases
- Lists of reporters to brief on specific topics
- Talking points for the mayor about the Team and its role
F.1 PUBLICIZING TARGETS

Many Teams have found it helpful to make a public commitment to targets. For example, Chicago committed to reducing the number of new restaurant inspections by 50% as part of its press release announcing the launch of the restaurant start-up program. A public commitment to targets has the advantage of implicitly committing a wide array of stakeholders to the mayor's goals. Public targets may also serve to galvanize action and set a framework for public accountability.

F.2 HOW TO COMMUNICATE ABOUT THE TEAM

While there may be a natural inclination to get the word out about your stellar team of high performers, the best Teams drive a structured process from behind the scenes by providing invaluable information and analysis.

GET ENGAGED It is the Owners and Sponsors who do the heavy lifting of getting a new idea off the ground, and should be perceived as the stars of the show. Experience shows that it is vital to give credit where credit is due.

With this in mind, the Team should be careful not to take too much credit whenever discussing the work internally or publicly. Team members should always first give credit to the partners responsible for the implementation of initiatives. Teams that consistently do this tend to find that potential partners begin to chase the Team, rather than the other way around.

CONCLUSION

At this point, initiatives have been selected, refined through logic models, delineated in charters, and detailed in work plans. Each initiative has an Owner responsible for day-to-day implementation and a Sponsor responsible for its overall success. The Team has moved partners through Steps 1, 2, and 3.

Moving into Step 4: Deliver and Adapt, Teams must prepare to transition from paper to reality. Teams that have chosen initiatives founded on rigorous research and relevant data, employed creative innovation techniques, diligently engaged partners and built relationships, and carefully planned for implementation are well positioned for success. But delivery will challenge all Teams. In the fourth and final step, Teams must be dogged in adhering to delivery routines and prepared to flexibly respond to the small, everyday crises that will inevitably arise.
A. DELIVERY ROUTINES
B. DEALING WITH RELUCTANCE DURING DELIVERY
C. CREATING CONDITIONS FOR LONG-TERM SUCCESS
In Step 3, the Teams worked to prepare for delivery, helping Owners and Sponsors prepare logic models, charters, and implementation plans. Now it is time to focus on delivery. What does it mean to deliver? Delivery is the effective implementation of planned initiatives, driven by structured project management practices and an unwavering focus on targets.

As initiatives launch or prepare to launch, Owners and Sponsors will be hard at work on implementation. The Team’s role in this phase is to support the Owners and Sponsors to implement initiatives with discipline, stay focused on progress toward targets, and coordinate efforts to quickly overcome obstacles.

This portion of the Playbook presents five specific and mutually reinforcing delivery routines, which have been tested and refined by real-world Innovation Delivery Teams. The routines help to ensure that the right information reaches the right people at the right time, and buttress the Innovation Delivery Model’s focus on metrics and targets. Each delivery routine is designed to be used on a regular, recurring schedule, and is presented here with real examples from existing Innovation Delivery Teams and their partners to help you get started quickly.

A. DELIVERY ROUTINES

Successful Teams put five core delivery routines in place:

1. **Initiative Check-Ins** occur between an Initiative Owner and a Project Manager.
2. **Team Updates** are meetings within the Team to update the Director on progress across initiatives.
3. **Mayor’s Updates** are memos (or meetings) in which the Director summarizes progress and elevates key issues for the mayor.
4. **Stocktakes** are group meetings with the mayor and senior leadership of the city to review progress on implementation goals and targets.
5. **In-Depth Reviews** are opportunities for the Team to carefully examine what has been achieved and what may need to change.
Exhibit 4.1, below, provides an overview of the objectives, participants, and timing of each delivery routine.

### THE FIVE DELIVERY ROUTINES

<table>
<thead>
<tr>
<th></th>
<th>INITIATIVE CHECK-IN</th>

<td>Project Managers, Director; Director sends to mayor</td>
<td>Mayor, Sponsors, Owners, Director, with others as necessary</td>
<td>Team (leads process), Owners and Sponsors; Teams sends to mayor</td>
</tr>
<tr>
<td><strong>WHEN?</strong></td>
<td>Daily to weekly</td>
<td>Weekly</td>
<td>Biweekly to monthly</td>
<td>Monthly to quarterly</td>
<td>Semiannually to annually</td>
</tr>
</tbody>
</table>

The timing outlined in the last row reflects the range of variation across existing Teams. While it is up to the Team to establish a specific cadence of routines that best fits its city, it is essential to establish a fixed schedule, as it is the consistency of the delivery routines within the city that sustains momentum.
How do you know that you are ready to begin using the delivery routines? Use of the routines should begin as soon as the bulk of the work plan (Step 3, Section D) is completed. In most cases, it is appropriate to begin delivery routines well before the public launch of an initiative in order to ensure that the launch stays on track.

Notably, a Team should not be involved with the delivery of a specific initiative indefinitely. Once initiative targets are achieved, the Team’s role in delivery support should end and the initiative need no longer be a part of the Team’s routines. This does not necessarily mean, of course, that the initiative itself will conclude—it may well continue to run for many years—but in keeping with the consultant-like position of the Team, an initiative that is designed to extend into the long term should “graduate” from the Team’s extra delivery support.

Each of the five routines is described in more detail in the sub-sections below.

**A.1 INITIATIVE CHECK-IN**

A Project Manager and Initiative Owner will likely work together on a daily basis. While working sessions and calls will take place as needed, there should be formal, recurring meetings to assess progress on an initiative and identify emerging issues.

These meetings, typically weekly, should follow a consistent pattern. The work plan developed in Step 3 will be an important reference document when preparing for these meetings. At the outset, four questions may form the agenda:

- What deliverables/tasks are expected this week and next week, and are they on track to be completed?
- What progress has been made since the last update?
- What new and emerging issues have been identified since the last meeting?
- How do we plan to resolve current issues and who else needs to be involved?

As time progresses and implementation milestones are achieved, the Owner and Project Manager should begin to spend more time thinking about progress on targets, using the trajectories developed in Step 3 to routinely assess if the initiative is on track to achieve targets.

Following is an example of a weekly Initiative Check-In template (or “Initiative Update”) used by the Louisville Innovation Delivery Team for a rezoning initiative. At the outset, Owners may require significant help from Project Managers to refresh the template each week. If this is the case, Project Managers should take care to ensure that they are transferring practical skills to Owners so that a transition can be made to the preferred arrangement, in which Owners draft the Initiative Update prior to the Check-In.
A key component of the tool above (and many other tools in the delivery process) is the “traffic light status,” which should be assigned prior to the Check-In and revisited, if necessary, during the meeting. The status reflects, at a glance, the overall progress of the initiative compared to expectations. Progress, in this sense, includes both completion of implementation steps and progress against trajectories, likely shifting in emphasis from the former to the latter as time progresses. The template’s traffic light is four-valued (green, yellow, orange, red), rather than three-valued (green, yellow, red) to avoid creating a “middle” choice, which is often overly tempting.
The table below describes the roles and activities for key participants in the Initiative Check-In routine:

### EXHIBIT 4.3

</tr>
<tr>
<td></td>
<td>■ Meets with Initiative Owner to discuss progress</td>
</tr>
<tr>
<td></td>
<td>■ Helps to resolve implementation problems</td>
</tr>
</tbody>
</table>

### A.2 TEAM UPDATE

Team Updates help Directors to stay on top of all of the initiatives in the Team’s portfolio. These weekly meetings between the Director and Project Managers offer comprehensive views of progress on priorities by bringing together information from each of the initiatives to prioritize top concerns, highlight systemic issues, and provide an opportunity to identify solutions.

The Project Manager(s) responsible for the initiatives covered in a Team Update use the Initiative Check-ins from their meetings with Owners as a basis for preparing the meeting template. These meetings generally aim to address three core questions:

- What is the overall status of the priority, and each initiative within it, based on milestones and targets set in the implementation plan?
- What are the major issues, and how critical are they? Is each issue an implementation problem, or is it something more serious that challenges basic assumptions about the initiative?
- What is the plan to resolve the issue? Will it sufficiently address the issue, and who needs to do what?
As with Initiative Check-Ins, weekly Team Updates will be most effective if the same standardized template is used at each meeting. The following is an example of the Team Update from the Louisville Team.

### TEAM UPDATE EXAMPLE

<table>
<thead>
<tr>
<th>INITIATIVE NAME</th>
<th>STATUS</th>
<th>ANALYSIS OF PERFORMANCE</th>
<th>KEY ISSUES/RISKS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Expand capacity of 911 non-emergency triage program</td>
<td>![Green Circle]</td>
<td>• Actual number of triaged 911 calls exceeded target by 34% for the quarter.</td>
<td>• Key risk to this level of performance is the loss of a triage nurse.</td>
</tr>
<tr>
<td>Expand the number of triaged PSiam calls transported via non-EMS transportation</td>
<td>![Green Circle]</td>
<td>• Ahead of performance because of additional non-emergent transportation provider (cost to city per trip: $18 vs. current cost of $340). • Revisited agreement with Wheels to expand wheelchair services.</td>
<td>• As the triage program expands, external transportation resources may not be able to support the volume.</td>
</tr>
</tbody>
</table>
The table below describes the roles and activities for key participants in the Team Update routine.

### A.3 MAYOR’S UPDATE

Effective Teams keep the mayor in the loop—updating him or her no less than monthly. Directors and Project Managers often use the syntheses done for the Team Updates as a starting place in preparing the Mayor’s Update, which is typically a brief memo. For the purposes of this routine, Teams typically consider and address three main questions:

- What progress has been made and what is the status of each initiative and the challenge overall?
- What are the main issues with implementation?
- What is the path forward, and, in particular, what can the mayor do to push things forward?

The core purpose of these updates is to address issues on which the mayor needs to act, either to approve a course of action or to resolve a controversy. These memos are usually no longer than two pages and follow a consistent structure. A recommended structure is: (1) the overall status of each initiative; (2) key issues to be resolved, with options; (3) key successes to celebrate, when appropriate; (4) supporting data. The memo should always offer clear recommendations for action. For instance, when recommending a success to celebrate, the memo should offer a specific idea of the time and place to do so; similarly, Directors must clearly state when a mayor needs to meet one-on-one with a key senior staff member to move things along. The Team must not pull punches: actors who are throwing up resistance or roadblocks should be appropriately called out so that they can be held accountable.

### WHAT THE TEAM UPDATE MEETINGS MEAN FOR KEY PLAYERS

<table>
<thead>
<tr>
<th>ROLE</th>
<th>ACTIVITY</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>PROJECT MANAGER</strong></td>
<td></td>
</tr>
<tr>
<td>- Prepares the summary for all initiatives in the priority area</td>
<td></td>
</tr>
<tr>
<td>- Assesses progress against the plan, determines significance of issues and adequacy of options</td>
<td></td>
</tr>
<tr>
<td>- Determines the most important issues to discuss</td>
<td></td>
</tr>
<tr>
<td>- If applicable, recommends actions for the Director</td>
<td></td>
</tr>
<tr>
<td><strong>DIRECTOR</strong></td>
<td></td>
</tr>
<tr>
<td>- Assesses progress against the plan, significance of issues, and adequacy of options</td>
<td></td>
</tr>
<tr>
<td>- Advises on options for resolving issues, including elevating to mayor or senior leadership</td>
<td></td>
</tr>
<tr>
<td>- Acts on recommendations (e.g., call deputy commissioner to resolve escalated issues)</td>
<td></td>
</tr>
</tbody>
</table>
The table below describes the roles and activities for key participants in the Mayor’s Update routine.

### A.4 Stocktakes

A key advantage of the Innovation Delivery Model is that it provides a framework for advancing solutions that cross departments, breaking down barriers between them in the process. In practice, the most important routine for cultivating cross-departmental collaboration has been the “stocktake.” At a stocktake, the Team, Initiative Sponsors, the mayor, and members of the mayor’s senior staff review progress across an entire priority, monitor movement on targets, share information openly, and resolve issues collaboratively.

Stocktakes are informed by clear, accurate data to create a common foundation for discussion and to direct focus to the most pertinent issues. Many Directors have noted that Teams and their agency partners would invest hours preparing presentations for stocktake meetings, and that this time was never wasted. Clean presentations of compelling information not only clarified the issues, but also established the professional reputation of the Team with the mayor and department leaders, and ensured time spent at the stocktake was used to advance the work. Another important by-product is to bring successes to the mayor’s attention in a timely manner so that the value of the work is reinforced.

There are several core questions to address at a leadership stocktake:

- What is the status of the priority overall, and within each individual challenge?
- Are we on track to achieve our overall target?
- What are critical implementation issues? How are we going to address them?
- What is the path forward and what is each department going to do to achieve it?
In each meeting, the mayor should ask detailed and pointed questions about progress and options for resolving problems. In order to effectively perform this role, successful Innovation Delivery Teams brief the mayor in advance to ensure that he or she is aware of the key issues in play and is ready to ask challenging questions. The Mayor’s Update immediately prior to the stocktake may serve as this briefing.

Stocktakes function best when the Team plays a large role in preparation, but a relatively minor role in speaking and presentation. The meeting should play out as a dialogue primarily between the mayor and the Sponsors.

The following examples are slides from actual stocktakes convened by Innovation Delivery Teams.

- 50% Increase Target (5.96) |
| Residential Purchase Program  
- Establish voluntary purchase program for 95-gallon recycling carts | ⭐️ | - Online cart purchasing now available (Apr)  
- Goal is 1300 purchased carts by end of 2014 (56% complete as of March 2013)  
- Note: 177 were purchased in all of 2011 |  
**Recycling Carts Purchased by Month and Aggregate**  
- Monthly Total  
- Aggregate |

This slide from a Louisville recycling stocktake provides an update of initiatives at a glance. Note the dual focus on the status of initiatives and on progress against challenge and initiative targets.
It is important to establish stocktakes as part of the regularly recurring routine. Although frequency has varied across the pioneer cities, most Teams have scheduled stocktakes monthly. No Teams scheduled stocktakes less frequently than quarterly. For illustration, here are the standing stocktake schedules of three existing Innovation Delivery Teams.

### Example Stocktake Frequencies

A.5 IN-DEPTH REVIEWS

Some Teams have found it is important to conduct a deeper review once or twice a year. This is a good opportunity to step back and understand whether initiatives might need modification, or whether the approach to implementation should be changed. Teams have used In-Depth Reviews as an opportunity to test their strategic thinking and to revisit the logic models developed during Step 3. The goal of the In-Depth Review is to reassess the prospects for achieving targets once a good deal of work has occurred.

Conclusions or action steps that may result from In-Depth Reviews include revisions to charters (done in conjunction with Owners and Sponsors); recognition that some initiatives should be dropped because they are not likely to succeed; realization that there is an opportunity, or need, for new initiatives within the priority or challenge; fresh thinking about the Team’s capacity given the current workload and trends in the workload; and new conclusions about the capacity of city departments and the implications for the long-term sustainability of progress on targets once the Team moves on to other priorities.

The following exhibits constitute a template for synthesizing and presenting the conclusions of an In-Depth Review.

<table>
<thead>
<tr>
<th>REVIEW: KEY RISKS AND BARRIERS TO TARGET ACHIEVEMENT</th>
</tr>
</thead>
<tbody>
<tr>
<td>RISK</td>
</tr>
<tr>
<td>-------------------------------------------</td>
</tr>

</tr>
</tbody>
</table>

In an In-Depth Review, best- and worst-case scenarios for target achievement are considered.
Some teams also use the In-Depth Review as a moment to reflect on relationships with Owners, Sponsors, and other partners, soliciting feedback on the Team's approach to collaboration and the experience of working with the Team, with the goal of using this feedback to contribute to the Team's ever-evolving relationship-building practices.

The table below describes typical roles and activities for key participants in the In-Depth Review.

### A.6 ENSURING PARTICIPATION IN ROUTINES

Teams find that in addition to establishing a regular schedule, participation in delivery routines is most reliable when the meetings such as weekly check-ins and stocktakes are universally perceived as productive.

[GET ENGAGED] Here are some concrete steps that can help ensure that the meetings are seen as productive:

- Always distribute an agenda in advance that includes discrete issues to discuss and resolve.
- Support decision making at the meeting so that there is a sense of forward movement.
- Help with the preparation of materials at the outset; transition later to an Owner-driven content creation paradigm.
- Begin delivery routines well before the actual rollout of initiatives.
- Ensure that the scheduled, recurring meetings are on the calendars of the right people.
In the early stages of delivery, the Team and its partners should learn to appreciate meetings as productive and look forward to the next. Teams have found that ending meetings short of the official end time is an effective way to do this. (For example, plan to cover everything in 45 minutes if a meeting is scheduled for an hour.) This ensures that there is plenty of time for unplanned questions and allows participants the small pleasure of leaving a meeting earlier than expected, which can go a long way.

**B. DEALING WITH RELUCTANCE DURING DELIVERY**

**GET ENGAGED** There may be times when a Team is faced with a Sponsor and/or Owner who does not seem interested in the work.

There are a variety of approaches to consider in addressing this situation.

Of course, it is best to avoid this sort of situation altogether. When considering which potential initiatives to implement, a Team should strongly consider the commitment of the anticipated Owner and Sponsor. A great idea can be sandbagged if there is no one available to take responsibility for the hard work of implementation. In situations such as these, some Teams feel pressure to move forward regardless, and find themselves executing key implementation tasks as de facto Owners. Teams that yield to this pressure have found that their overall effectiveness becomes compromised.

If an Owner or Sponsor is not engaged, it is often advisable for Team members to put themselves into the head of those who are reluctant to carry out work. Do they see the Team as a threat? Do they not believe in the initiative? Do they fear neglecting other work? Understanding the source of a lack of enthusiasm is the first step in addressing it. Communicating directly with a reluctant partner may surface the most promising pathway for strengthening the partnership and moving forward.

If there is a clear Owner or Sponsor but that person is not productively engaged, the mayor might be able to help. The Team should be judicious in soliciting the mayor's help, but, in many cases, a well-timed intervention by the mayor, reinforcing that initiatives are top priorities and confirming or assigning responsibility to the appropriate individuals, is all that is needed to get back on track.

**C. CREATING CONDITIONS FOR LONG-TERM SUCCESS**

The steps outlined in this chapter are most likely to lead to successful delivery if they are supported by a Team that is devoted to self-improvement, documents success to communicate the benefit of the process and to justify continued investment, and does not spread itself too thin.
C.1 CONTINUALLY IMPROVE THE TEAM

Through their efforts to help departments deliver, the members of the Innovation Delivery Team will become some of the best practitioners of continuous improvement in city government. It is also essential, however, for a Director to ensure that the Team itself learns from experience and is continuously improving. This can be achieved through regular check-ins and end-of-project reviews.

Many Teams have regular feedback sessions. These help Directors understand how the Team is feeling about its impact and teamwork. In addition, after an initiative wraps up, it is important to debrief to assess where and why the team encountered problems and what a better approach would have looked like. The In-Depth Review, described earlier, may also be a good opportunity to solicit feedback from partners on the Team’s approach so far.

C.2 ANTICIPATE CHANGE

It is inevitable that there will be staffing changes within the Innovation Delivery Team or a partner department. Such changes can delay or derail projects, especially if they are unplanned. Teams should strive to ensure that information is not overly “silied” by making sure that Project Managers have a knowledgeable backup and that project documentation is extensive. When a Sponsor or Owner changes, Teams must expect to invest significant time to introduce the Model from the ground up to a new person.

FROM A DIRECTOR: BE PREPARED FOR STAFFING CHANGES

“When a Sponsor or Owner changes, don’t assume that the Team’s work is a priority for the new person. Take the time to inform new people about the project. Demonstrate the value and assistance that will be provided by a Team. Be understanding about the fact that a new person has a steep learning curve.”

C.3 RECOGNIZE WHEN TO STEP AWAY

Once challenge-level targets are achieved, or are well on the road to being achieved, the Team should wind down its involvement and be reassigned to new challenges or priorities by the mayor. The Team’s role in city government should be that of a precious resource, able to drive rapid progress on the most pressing issues facing the city. The Innovation Delivery Model presumes that, over time, the Innovation Delivery Team will be redeployed in the places where the need is greatest and where it can add the greatest relative value among a competing array of challenges and priorities.

In some cases, delivery routines such as stocktakes will continue to occur after the Team shifts focus, depending on the wishes of the participants.
C.4 DOCUMENT AND SHARE SUCCESSES

Finally, the Team Director (or a designee) should keep track of the Team’s accomplishments, experiences, and lessons. Documenting and sharing what the Team learned and the impact it helped achieve builds its morale, brand, and credibility. Tracking and documenting evidence of success can be a powerful tool to support fundraising efforts. It can also help build relationships with new stakeholders who can be helpful in future Team activities.

CONCLUSION

This chapter explained how to create a successful delivery system—from best-practice roles for key players to the routines and techniques that can instill a disciplined approach to delivery.

This is the last of the four steps of the Innovation Delivery Model, but Teams are far from finished with their work. The innovation and delivery process is ongoing, allowing for a continuous cycle of innovation and reform. Although the Playbook presents a sequential model, a Team’s work involves a great deal of iteration and numerous feedback loops within and between steps. For instance, In-Depth Reviews may show that certain initiatives are not making sufficient progress toward a challenge goal over time—potentially requiring a Team and city to develop new initiatives (Step 2: Generate New Ideas) or tackle different challenges (Step 1: Investigate the Problem). An In-Depth Review may also show that the Team has the capacity to take on new work—potentially leading to the identification of new priority areas (Getting Started). Continuous adaptation driven by vigilant data monitoring is a way of life.

Bloomberg Philanthropies created the Innovation Delivery Model to take some of the risk out of innovation and enable mayors and cities to develop and deliver powerful solutions to major urban challenges. Whether the process outlined in this Playbook is a fundamentally new way of getting things done, or whether it builds on your city’s existing practices, we hope that the Innovation Delivery Model empowers your city to take on top priority problems and tackle them—thinking boldly and strategically to make life better for citizens.

The Innovation Delivery Model can and should accelerate your efforts to devise and execute great ideas in your city. We hope it is a positive influence on the way the mayor’s office and city departments serve citizens, contributing to a renewed focus on innovation, collaboration, and data-driven management.
# Glossary

**Challenge**
A specific obstacle within a priority area that the Team and its partners hope to address.

**Contributing Issue**
The most significant factors that affect the size and nature of a challenge.

**Delivery**
The act of bringing services or programs to citizens and end users.

**Director**
The leader of an Innovation Delivery Team.

**Initiative**
Specific actions or programs the Team and its partners will undertake to help address contributing issues and achieve targets.

**Innovation**
A new and novel idea, method, or service being applied at a large scale.

**Innovation Delivery Model**
The structured process that guides the work on a Team.

**Innovation Delivery Team**
The group responsible for driving the innovation and delivery within a city.

**Owner**
The point person for initiative implementation, frequently based in the city department that is primarily responsible for the initiative.

**Priority**
A broad area in which Teams work to achieve results.

**Sponsor**
The point person who is accountable to the mayor for an initiative.
