

Research management: Access controls – ENTC <GO>

The transparency and control you need now.

Appropriate access to research is a vital concern now more than ever under MiFID II. Our entitlements tool gives buy-side administrators the ability to control the research that their users can access and request to guard against unsolicited research.

Key benefits

Streamlined filtering & search capabilities.

Easily discover research providers by content type, asset class, sector or region, so you can modify privileging more precisely.

Managing access with user communities.

Administrators can connect to their own internal user directories or create communities of users to allow more uniform research entitlements. Automatic requests can be generated for new users to gain seamless access to entitled sources.

Monitor unsolicited research.

Quickly identify and disable entitled research from unsolicited providers. Full audit logs with timestamp details are available to view.

For more information about Bloomberg's Research Management Solutions, visit [RMS <GO>](#) or [MIFI <GO>](#) on the Terminal or contact a sales representative.

Provider	Package	Status
